File Version Number: 6 Final
File Version Date: 19/06/2014

Acknowledgements

The hard work and effort of all contributors to this User Guide is gratefully acknowledged.

Thanks, in particular, are extended to primary care colleagues in NHS Fife and the GP practices and community pharmacies who took part in the Early Adopter initiative for their assistance in contributing to the working processes underpinning the Chronic Medication Service. Thanks are also due to Dr Scott Cunningham and the staff at the School of Pharmacy and Life Sciences at Robert Gordon University for supplying the case studies for the test patients.

Introduction

The Pharmacy Care Record (PCR)

PCR is a web-based application that assists Pharmacists with Pharmaceutical Care Planning in Scottish community pharmacies.

A registered PCR user can create and maintain patient records that contain information that relates to:

- Patient details
- Pharmaceutical care plans
- Care issues and care issue outcomes
- High risk medicine care risk assessments for Methotrexate, Lithium and Warfarin
- New medicine interventions
- Support tool assessments for Gluten-free and smoking cessation

This functionality is further supported by:

- A rigorous access and security model
- The capability to synchronise patient medication history and patient demographic information between the PMR and PCR
- Pharmacy level reports
- External link to the MHRA [YellowCard](#) web portal

About this user guide

This user guide covers all versions of PCR up to and including version 9.

New functionality in PCR version 9 includes:

- Smoking Cessation Support Tool Assessments
- Link to national CHI system to match patient CHI number

This user guide complements the NES Pharmacy Chronic Medication Service (CMS) Implementation Resource Pack. Resource pack copies are available on request from NES Pharmacy.

In particular, this user guide should be read in conjunction with section 4 of the NES Pharmacy CMS Implementation Resource Pack which describes the pharmaceutical care planning process.

Some figures in this user guide show screens from previous versions of PCR; These screens represent current version 9 layout and functions.

Creating test patients

Test patients can be created to assist with PCR training. Test patients must be given one of the following CHI numbers:

- 5555555555
- 7777777777
- 9999999999

All pharmacies can create test patients with these CHI numbers. Test patients will only be visible for the pharmacy where they are currently associated.

Using these CHI numbers will ensure that the test patients can be identified easily and are excluded from any relevant processing and reporting.

It is important to ensure that test patients do not resemble real patients. To assist with this, suggested patient names are listed in "Appendix D: Example test patients". The pharmacy address can be used to complete the demographic data for each test patient.

Test patient must not be added to the PMR. The PMR to PCR interface will not work with test CHI numbers.

User guide structure

Section 1: Access and security

Understand the security arrangements for PCR and Use the 'associate' function to determine your pharmacy and login to PCR.

Section 2: High-level menu functions

Explains the links on the high level menu with reference to more detailed guidance on some functions elsewhere in the document.

Section 3: Search for and create patient records **Updated!**

Detailed guidance on how to create and search for patient records on PCR.

Section 4: Pharmaceutical care plans

Create and maintain pharmaceutical care plans for patients including the creation and maintenance of patient profile information, and care issues and care issue outcomes.

Section 5: High risk medicine care risk assessments

Create and maintain high risk medicine care risk assessments and associate care issues and care issue outcomes to a high risk medicine care risk assessment.

Section 6: New medicine interventions

Create and maintain new medicine interventions and associated care issues and care issue outcomes.

Section 7: Gluten-free Support Tool Assessment

Create and maintain Gluten-free Support Tool Assessment and associated care issues and care issue outcomes.

Section 8: Smoking Cessation Support Tool Assessment **New!**

Create and maintain smoking cessation Support Tool Assessment and associated care issues and care issue outcomes.

Section 9: Reports **Updated!**

This section includes details of the outstanding care issues report, patient summary report, new medicine interventions reports, diagnosed Coeliac patient report, High risk medicine assessments reports and smoking cessation support tool reports

Section 10: PMR interface to PCR

Understand the relationship between PCR and the Patient Medication Record (PMR) application

Appendix A: Error Messages

Full list of application error codes and their meaning

Appendix B: Create PCR shortcut on desktop

Create a shortcut to PCR on your desktop if one doesn't exist.

Appendix C: PCR association – common issues

Explains common issues with the PCR association process.

Appendix D: Example test patients

Three example test patients

Appendix E: Test patient case studies

Test patient case studies to help you learn about PCR.

1 Access and security

1.1 Access and security principles

PCR security and access protocols are built around 5 key principles:

- Access is only allowed from Scottish community pharmacies via an independent community pharmacy N3 connection or an authorised corporate network with an approved N3 gateway.
- Access to PCR is limited to practising pharmacists who work in Scottish community pharmacies.
- All pharmacists who practice in Scottish community pharmacies have an individual User ID and password to access PCR.
- A pharmacist can only access PCR records for the patients of the community pharmacy where they are currently working.
- All access attempts to PCR and updates / viewing of patient records are audited.

1.2 User ID and password

All practising pharmacists in Scotland who work in a community pharmacy and require access to PCR will need a PCR User ID and password.

Health Boards have responsibility to identify PCR users and to distribute the User IDs and passwords.

1.2.1 Determining your User ID

Your user ID varies based on when you were initially provided with access to PCR:

- If you received your PCR User ID prior to 5th October 2010 your PCR User ID is your RPSGB membership number.
- If you received your PCR User ID from 1st February 2011 your PCR User ID is your GPhC registration number.
- If you received your PCR User ID after 5th October 2010 but before 1st February 2011 your PCR User ID is one of either your GPhC registration number, or your RPSGB membership number.

1.2.2 Change password on initial login

On first login to PCR the password must be changed using the update password page (Figure 1-1). The system automatically displays this page on initial login.

Figure 1-1: Update password page

Note: A users initial password will have been delivered using secure stationery that is similar to those used by banks for the distribution of PIN letters for debit or credit cards.

To change password on initial login:

- Tear off the secure slip at the bottom of the password letter and place it on a light background. The password can then be read from the tear-off slip.
- Re-enter User ID and initial password and then enter a new password on the update password page (Figure 1-1)
- Click the "Change Password" button (Figure 1-1)

If the password change is successful the system displays the "Search criteria" page.

Note: A password must be a minimum of 8 characters and include at least one digit and one non-alphanumeric character (e.g. '&', '*', etc.). This is similar to the password requirement for an NHS Mail account.

A password must be different to any previously used passwords.

Passwords will expire every 60 days, the system will prompt to change password on expiry.

A password can be changed at any time by selecting the 'Change Password' option on the high level PCR Menu (See section).

User IDs and passwords must only be used by the person that they were distributed to and must be kept secure. All access to PCR (login, viewing and

updating of patient records) is audited and patterns of inappropriate use are investigated.

Note: Any queries regarding passwords or User IDs should be directed to the ePharmacy helpdesk – **0131 275 6600**.

1.3 Associating with a community pharmacy

A user can only access patient records relating to the pharmacy where they are currently working. A user must “associate” with the pharmacy where they are working when they begin work in their usual or a different pharmacy - usually each morning.

In most pharmacies the association process can only be performed on the main ‘server’ computer in the pharmacy, however, some large multiple pharmacies may allow the association process from any computer in the pharmacy.

The main server computer is usually the one where the ePharmacy Certificate Management Application is installed and the ePharmacy Client Certificate resides (except Lloyds pharmacy).

The association process makes use of the ePharmacy Certificate in one of the checks to ensure that the user is actually located in the pharmacy that they are currently requesting to be associated with.

Note: Association only needs to be performed once a day or when moving to a different pharmacy - where a user has already associated with another pharmacy that day.

An icon may be present on the Windows desktop of the computer used for accessing the PCR association function; if an icon is not present then a link to the association page is present on the SHOW Community Pharmacy website:

<http://www.communitypharmacy.scot.nhs.uk>

Alternatively the following URL (website address) can be used to access the PCR association function:

<https://pcrua.mhs.scot.nhs.uk>

Further information on creating a PCR icon on the Windows desktop can be found in “Appendix B: Create PCR shortcut on desktop”.

The PCR association page includes ‘Message of the Day’ text. This is used to display messages that relate to planned downtime on either PCR or the ePharmacy Message Store (EPMS). It is also used to display information about new functionality releases on PCR.

1.3.1 Perform an association

Step 1 - Navigate to website and accept first security alert:

- Navigate to the PCR association website
- In the “Security Alert” dialogue box Select “Yes” to allow the website to gain access to the digital certificate (Figure 1-2).

Figure 1-2: PCR association first security alert

Step 2 - Enter user credentials:

- Enter PCR User ID, Password and contractor code and select the “Associate User” button (Figure 1-3)

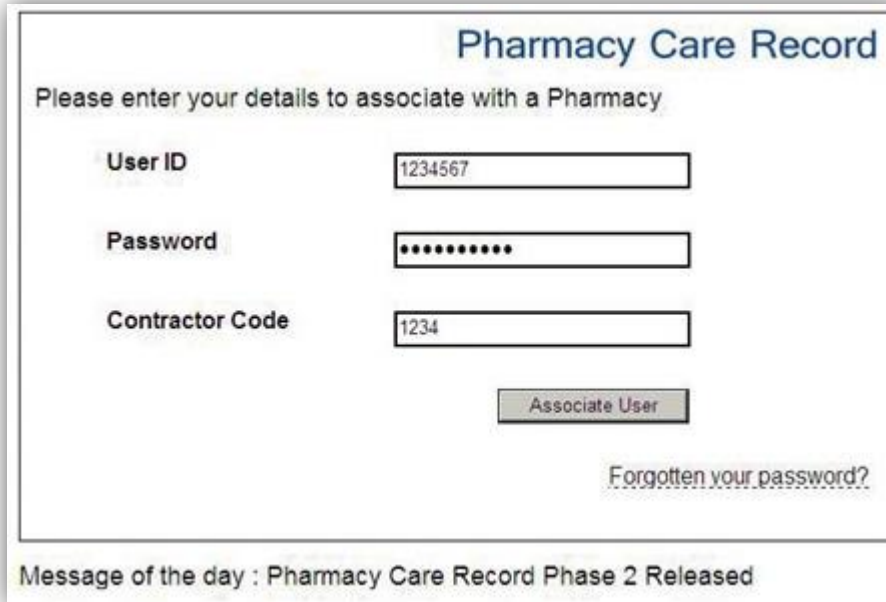

Figure 1-3: Associate User

Step 3: Accept second security alert

- In the "Security Alert" dialogue box, click "Yes" to accept the final security certificate (Figure 1-4)

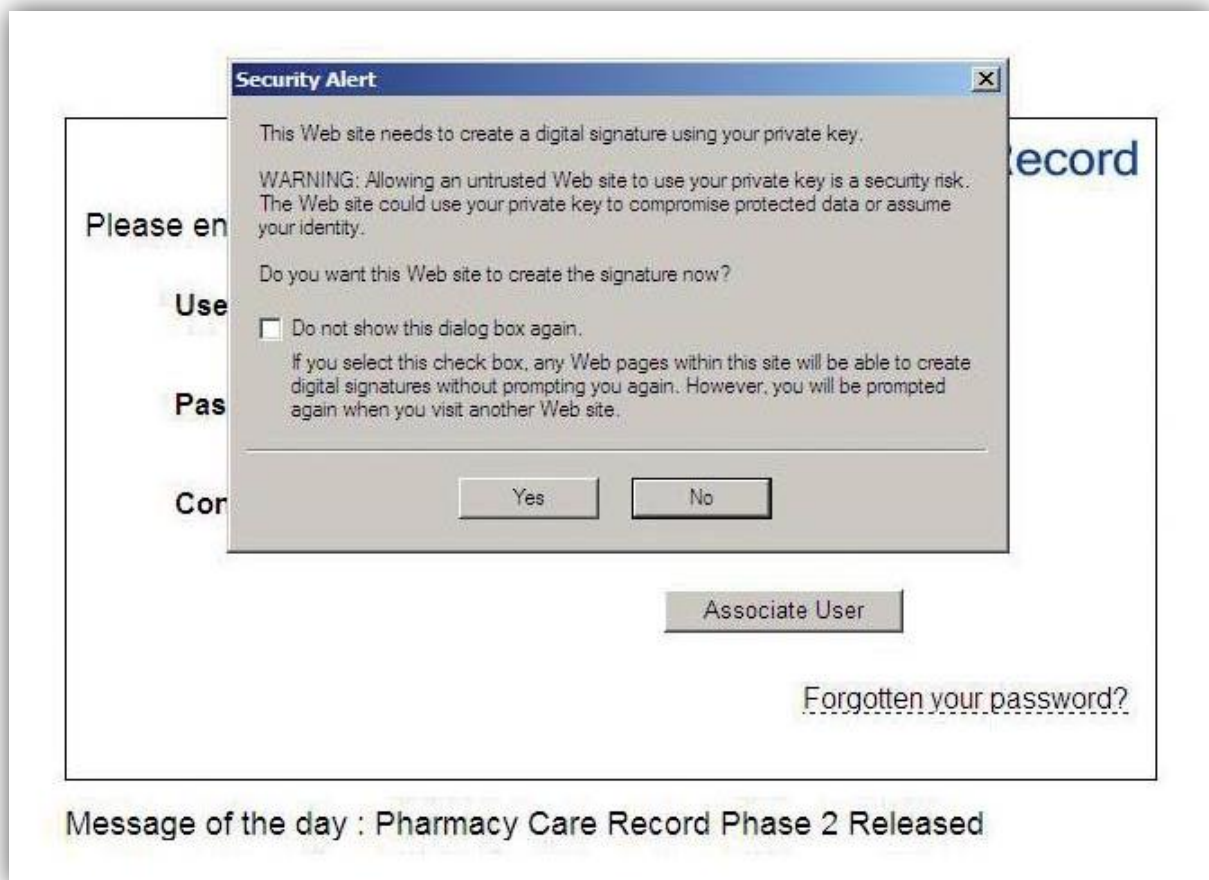

Figure 1-4: Association final security certificate

Note: The "Security Alert" dialogue box is displayed because the ePharmacy Certificate is being used to digitally sign a message and send this to the PCR server as part of the security check for the association process.

Step 4: Check that association has been successful

If the association is successful the following a message will be displayed in green text (Figure 1-5).

Pharmacy Care Record

Please enter your details to associate with a Pharmacy

User ID (RPSGB / GPhC) <i>(for further information click here)</i>	<input type="text" value="TestUser"/>
Password	<input type="password"/>
Show password	<input type="checkbox"/>
Contractor Code	<input type="text" value="1234"/>

Association has been created for TestUser to pharmacy 1234.

[Click here to login to PCR](#) [Forgotten your password?](#)

Authorised Users Only

Message Of The Day
Welcome to Pharmacy Care Record

Figure 1-5: Association successful

At this stage, only association with a pharmacy is complete. A further step is required to login to the main PCR application to access patient records.

Note: From PCR Phase 8 a "Click here to log in to PCR" link is shown after successful association. Use this link to navigate to the PCR login page.

1.3.2 Conditions that require a change of password after successful association

On successful association, the system will prompt to change password if:

- A new PCR user and associating for the first time
- Password has expired

Note: Learn how to perform a change of password at any time in Section 2.2.4, Change password.

When a password has been changed the association page will be re-displayed and the association process will require to be repeated from step 2.

1.5 PCR Login process

1.5.1 Accessing PCR from a computer

Once associated to a pharmacy, The PCR application can be accessed in the following ways:

- By following the link on the association page, Figure 1-5
- From a desktop shortcut on any PC in the pharmacy where you are working.
- Via the following URL: <https://pcr.mhs.scot.nhs.uk/>
- A link on the Community Pharmacy website

A desktop shortcut to PCR can be created if none exists (See, Appendix B: Create PCR shortcut on desktop).

1.5.2 Login to PCR

To login to PCR:

- Go to the Login page (Figure 1-6)
- Enter User ID and Password
- Click the "Login" button

Pharmacy Care Record

Please enter your details to login

User ID (RPSGB / GPhC)
(for further information [click here](#)):

Search criteria

Family name	<input type="text"/>
Given name	<input type="text"/>
Date of birth	<input type="text"/> 
	<small>e.g: 31-07-2013 for the 31st of July 2013</small>
Postcode	<input type="text"/>
CHI	<input type="text"/>
<input type="button" value="Search"/>	

Search results

Figure 1-7: "Search criteria" page

Note:
 On the "Search criteria" page, Family name = surname; Given name = first name.
 From PCR Phase 8 onwards, all date fields in PCR have a date picker function (As shown for date of birth field (above))

1.5.3 Common information and functions on all PCR pages

The heading at the top of the "Search criteria" page is consistent across all PCR pages and displays the details of the current user, the contractor code and the name of the pharmacy the current user is associated with.

The high level menu is displayed below the heading and is also displayed on each page. The high level menu allows you to quickly move between the different functions within PCR. The High-level menu functions are detailed in Section 2 of this guide.

1.5.4 Login failure

If the login has failed, then the reason for failure will be displayed in **bold red text** (Figure 1-8). Examples of reasons for login failure include: incorrect password, incorrect User ID or no association for the user.

Pharmacy Care Record

Please enter your details to login

User ID:

Password:

[Forgotten your password?](#)

Your user credentials are not currently associated with a Pharmacy

Figure 1-8: Login failure example

You must associate with a pharmacy before you can continue with the PCR login process.

1.5.5 Alternative login scenarios**First time Login**

If you are logging in to PCR for the first time the change password screen will display instead of the "Search criteria" screen. In this case, See "Changing your password on initial login" section.

Login from PMR application

Some pharmacy Patient Medication Record (PMR) systems have the ability to directly link to a patient's PCR record from within the PMR. If logging in from within the PMR application the "Search criteria" screen will not be displayed. Further information on PCR integration with PMRs is detailed in section 8 of this guide.

1.6 Technical environment**1.6.1 Browser compatibility**

PCR is a web application and has been tested for compatibility with Microsoft Internet Explorer 6, 7 and 8. The main PCR application is available from any computer within a Scottish community pharmacy that is connected to the N3 network (either directly or indirectly via an approved corporate network).

1.6.2 Saving changes in PCR

As PCR is a web application, changes made must be saved by clicking the 'Save' (or equivalent) button on each page. If an Internet Explorer browser window is closed the system will not prompt for changes to be saved. It will just close and any changes made will be lost.

1.7 Maintain reset password questions

The purpose of this feature is to securely reset a password, without the need to contact the ePharmacy helpdesk. This is achieved by recording answers to security questions such as:

- "What primary school did you attend?";
- "What was the name of your first pet?"; or
- "Name an author that you enjoy?";

Step 1 - Navigate to 'Manage Profile' page:

- Login to PCR
- Select "Manage profile" from the high-level menu (the system will display the "Manage profile" page

Step 2 – Navigate to "Manage Reset Password Questions" page:

- Select "Manage my reset password questions" link from the "Manage profile" page (Figure 1-9)

Pharmacy: 1234 - Pharmacy One

Delete question link

Figure 1-12: Delete reset password question

1.10 Reset password

Use the reset password process to change your password where a password has been forgotten and a sufficient number of reset password questions have been set.

Step 1 - Click "forgotten your password?" link:

- Select the "Forgotten your password?" link on the PCRUA or PCR login screen (Figure 1-13)

Figure 1-13 "forgotten your password" link

Step 2 - Enter user details:

- Enter User ID and click the "Start" button (Figure 1-14)

Figure 1-14: Start the reset password process

Step 3 - Start the reset password process:

- Select "Yes" to continue and remove any associations [Selecting "No" will return to the login page] (Figure 1-15)

Note: Selecting the "Yes" button will remove an existing association and mandate the need to re-associate (See section 1.3).

The screenshot shows a web interface titled "Pharmacy Care Record". The main heading is "Start the reset password process". Below this, there is a label "User ID (RPSGB / GPhC)" with a subtext "(for further information [click here](#))". To the right of the label is a text input field containing the value "1234567". Below the input field are two buttons: "Start" and "Cancel". Below these buttons is a confirmation question: "Resetting your password will remove any current pharmacy association. Are you sure you wish to continue?". At the bottom of the form are two buttons: "Yes" and "No".

Figure 1-15: Confirm continue and remove any associations

Step 4 - Answer password reset questions:

The system will prompt to provide answers to a sample of questions that have already been configured for the password reset process. (Figure 1-16).

- Type question answer in the single line text box and click the "Answer Question" button.

The screenshot shows a web interface titled "Pharmacy Care Record". The main heading is "Reset password questions for 1234567". Below this, there is a prompt: "Please answer the following question:". The question is "What is your favourite book?". Below the question is a single-line text input field. To the right of the input field is a button labeled "Answer Question".

Figure 1-16: Enter answer to reset password question

Step 5: Set password:

Having successfully answered a sufficient number of reset password questions a new password can be set.

- Enter new password into the "New password" box and the "Confirm password" box and click the "Set Password" button to change your password (Figure 1-17)

The screenshot shows a web form titled "Pharmacy Care Record" with the subtitle "Set password for testuser". It contains two text input fields: "New password:" and "Confirm password:". To the right of the "Confirm password:" field is a "Set Password" button.

Figure 1-17: Set password

Note: The new password must meet the minimum security standard of 8 characters including at least one digit and one non-alphanumeric character (e.g. '&', '*', etc.). If the password entered is the same as any previously used passwords the system will require you to enter a different password.

You can either change your password to a new one or simply start using a forgotten password that you have later remembered. Entering into the reset password process does not force you to change your password if you then remember your current password.

1.11 Expiring Password Warning

On login to PCR there is a warning on the main menu to highlight that the password is due to expire shortly.

Fourteen days prior to when a password is due to expire the "Change password" menu item will be highlighted in yellow.

Hovering the cursor over the "Change password" menu item will display the number of days before the password is due to expire.

Figure 1-18: Expiring password warning

1.12 Last login date and time

For security, the last login date and time is displayed in PCR (Figure 1-19)

Figure 1-19 Last login date and time

Note: Please, inform the ePharmacy helpdesk by phone (0131 275 6600) or email (nss.psdhelp@nhs.net) with any concern that your account is being used by someone else.

2 High-level menu functions

2.1 Overview

The PCR high-level menu contains links to other PCR functions (Figure 2-1). These links are not patient specific but give access to pharmacy-wide functions.

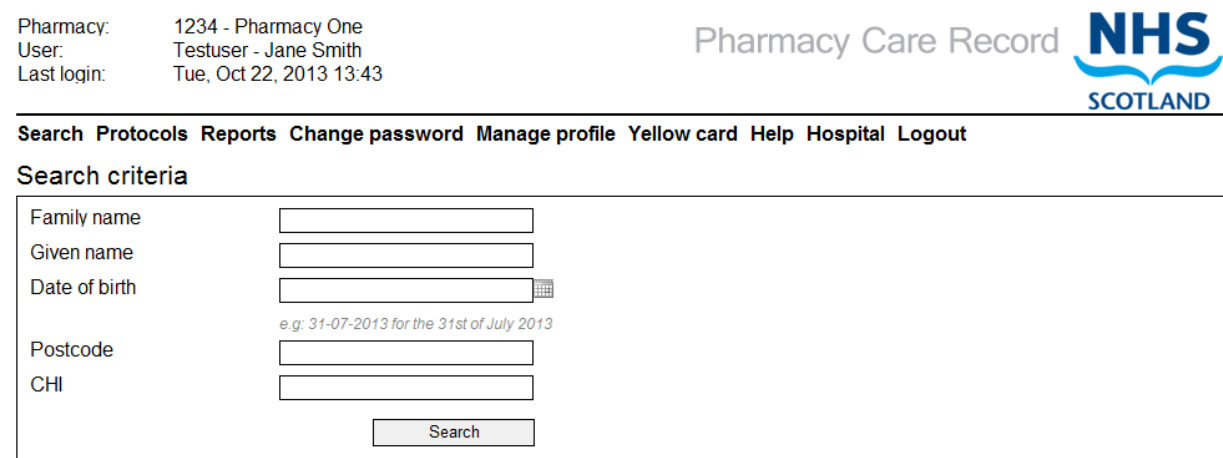

Figure 2-1: PCR high level menu

Note: Remember PCR is a web-based application and clicking on any high-level menu option will immediately open the relevant PCR page. Any changes you have made in a previous screen will be lost if you have not saved updates.

2.2 Menu functions

2.2.1 Search

Selecting the "Search" menu will display the "Search criteria" page (Figure 2-2)

Search results

Figure 2-2: Search criteria page

Full guidance on using the search function is covered in section 3, Search for and create patient records.

2.2.3 Protocols

The "Protocols" menu is intended to be used to list the CMS disease protocols (Figure 2-3: Protocols.).

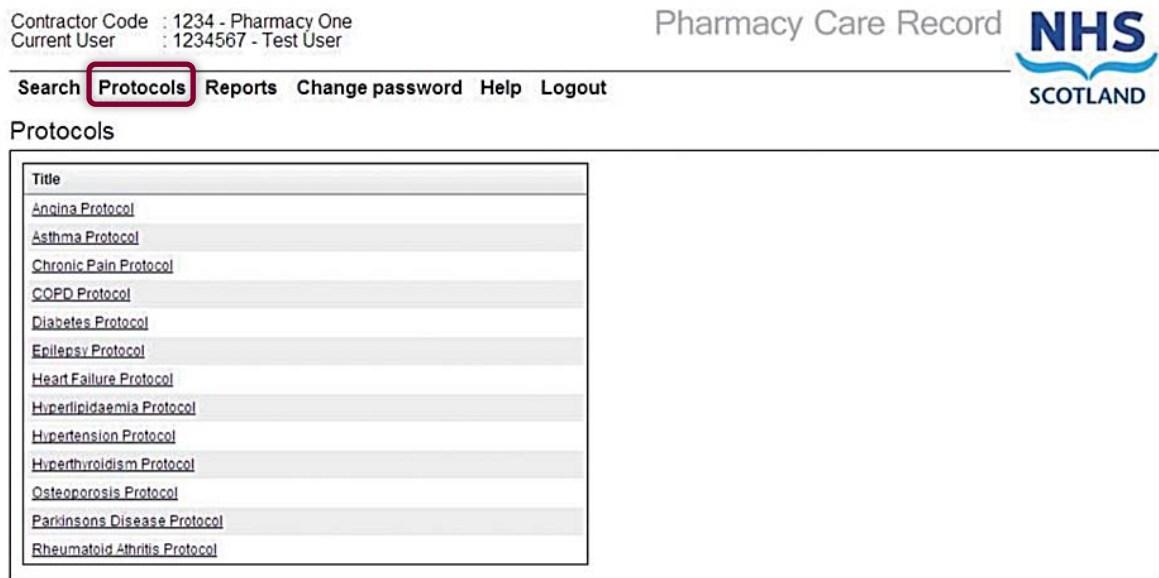

Figure 2-3: Protocols

Note: At present there are no disease protocols associated with the links on the protocols page.

2.2.4 Reports

Select the "Reports" menu to view a list of reports available to the Pharmacy. Reports are explained in section 9 of this guide.

2.2.5 Change password

Selecting this function will display the change password page (Figure 2-4).

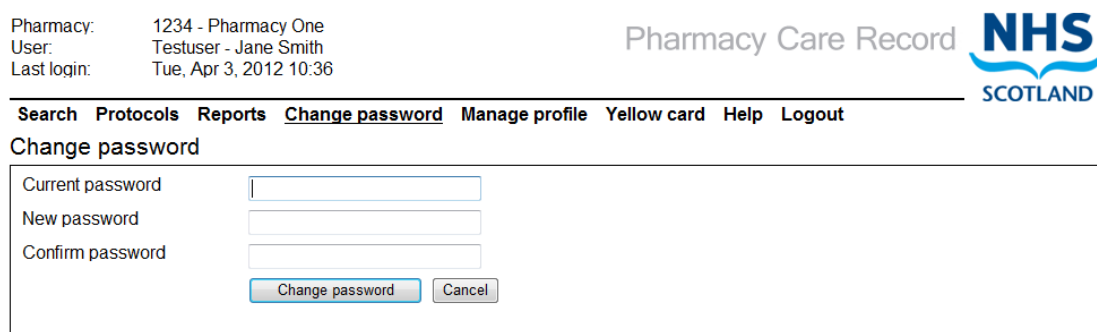

Figure 2-4: Change password page

The change password function can be used at any time.

2.2.6 Manage profile

Use this function to access links to manage details relating to the user’s profile, password reset questions and also a link to the change password functionality (Figure 2-5).

Figure 2-5: available options on “Manage profile” page

Pharmacists can now change the details held about them in the PCR system (such as their name, email address and how their name is displayed in PCR).

Step 1 - Access the manage profile page:

- Login to PCR
- Select Manage Profile from the main menu
- The system will display the Manage Profile Page.
- Select the “Manage my profile” link (Figure 2-6)

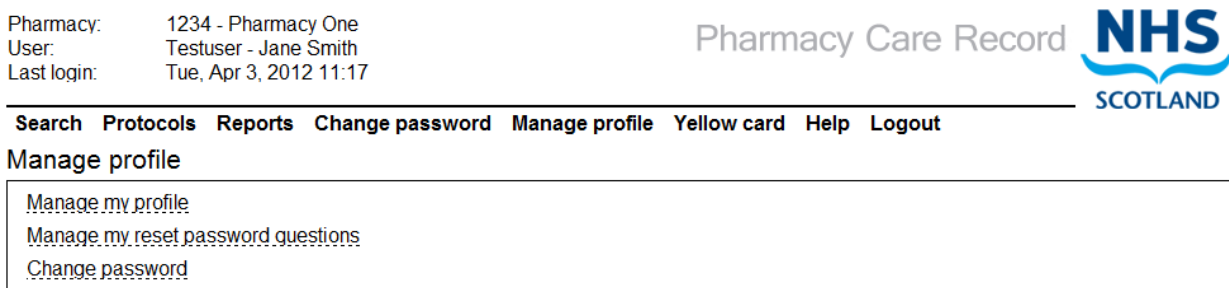

Figure 2-6: Manage profile options

Step 2 - edit profile details:

- The Pharmacist Profile page will now be displayed (Figure 2-7)

User options:

- Change details as appropriate and select Save - details will be saved in PCR
- Select “Cancel” to exit without saving changes

[Home](#) [The Yellow Card Scheme](#) [FAQs](#) [Further Information](#) [Downloadable Information](#)

[Contact Us](#)

Welcome to the on-line reporting site for the Yellow Card Scheme

You can report suspected side effects (also known as adverse drug reactions) to a medicine, vaccine, herbal or complementary remedy by clicking "Report Side Effect" below.

The Yellow Card Scheme, run by the MHRA and the Commission on Human Medicines, is used to collect information from both health professionals and the general public on suspected side effects.

Report Side Effect

Important information about side effects

All medicines can cause side effects. Some may not yet be known so that's why it's important for people to report to the Yellow Card Scheme. Many side effects are mild, but some can be serious and even life-threatening. Others appear after taking a medicine for a long time or even after stopping a medicine.

It is important for people to report as these are used to identify side effects and other problems which might not have been known about before. If a new side effect is found the MHRA will review the way that the medicine can be used and the warnings.

Help

Contact Details	Please contact us at: Tel: 0131 275 6600 or email us : nss.psdhelp@nhs.net
User Guide	View Guide This PCR User Guide is in a format called PDF. If you cannot open the help guide please contact either your pharmacy system supplier or IT support. Alternatively if your system allows, a viewer (Adobe Acrobat Reader) can be downloaded and installed onto most PCs. Click here to go to the Adobe Acrobat Reader website.

Figure 2-9: PCR help information with link to user guide

The help page also includes information about installing Adobe Reader.

2.2.11 Logout

Selecting the logout option from the high level menu will logout the current user and display the login page (Figure 2-10)

The screenshot shows a login page titled "Pharmacy Care Record". The page contains the following elements:

- Pharmacy Care Record** (Page Title)
- Please enter your details to login** (Instruction)
- User ID (RPSGB / GPhC)** (Label) with a text input field. Below the label is the text: *(for further information [click here](#)):*
- Password:** (Label) with a text input field.
- Login** (Button)
- [Forgotten your password?](#) (Link)

Authorised Users Only

Figure 2-10: Login page displayed after logout has been selected

3 Search for and create patient records

3.1 Overview

The Search criteria page (Figure 3-1) is automatically displayed when you have successfully logged into PCR (if not invoked from within the PMR application). The Search criteria page can also be displayed at any time by clicking on the 'Search' link on the high-level menu.

A search must include at least one of the following criteria:

- Family name (surname)
- Date of birth
- CHI Number (Search on all or part of a CHI number).

Other identifying information such as given name (first name) or Post Code can also be entered to limit the number of records returned.

Searches are not case sensitive.

[Search](#) [Protocols](#) [Reports](#) [Change password](#) [Manage profile](#) [Yellow card](#) [Help](#) [Logout](#)

Search criteria

Family name	<input type="text"/>
Given name	<input type="text"/>
Date of birth	<input type="text"/> <input type="button" value=""/>
	<i>e.g: 31-07-2013 for the 31st of July 2013</i>
Postcode	<input type="text"/>
CHI	<input type="text"/>
	<input type="button" value="Search"/>

Search results

Figure 3-1: Search criteria page

Note: The scope of any search is limited to patients who have a PCR record at the community pharmacy where the user is currently associated. If a patient has a PCR record associated with another pharmacy it will not be visible. (It is possible to create a new record for the patient which will then be uniquely linked to the current associated pharmacy).

3.3 Using the search function

To search for a patient:

- Type the search criteria into the form and click the "Search" button

3.3.1 If the search is successful

- A list of records that match your criteria will be displayed (Figure 3-2)

User Options:

- Select the "view" link for the patient you want to view (this will display the patient home page for the selected patient); or
- Create a new patient record if you are satisfied that the patient you were looking for does not exist in PCR

	<input type="button" value="Search"/>

Search results

No matching patient record has been found.
 Please change your search criteria or [click here](#) to create a new PCR record.

Figure 3-4: No matching patient records found

3.5 Manually create a patient record

The option to manually create a new patient record is only available via the “click here” link if:

- a patient search has completed and no records have been found (Figure 3-4)
- a patient search has completed and the searched for patient is not listed (Figure 3-4)
- **Note:** [Section 10 of this User Guide details the process for creating a patient record using the patient interface functionality between your PMR application and PCR.]

3.5.1 Where the CHI Number is known

To manually create a patient record:

- Select the “Click here” link from the Search criteria / search results page, (The “Patient Details” input page is displayed, Figure 3-5)

Figure 3-5: Patient details

- Enter the patient details
- Select the “Save” button*, the patient home will be displayed (Figure 3-10). A new patient will be created in PCR.

Note: CHI, Given name, family name, and date of birth are mandatory. All other patient details are optional.

3.5.2 Where the CHI Number is not known

If the CHI is not known, the "Find CHI" function can be used to search the National CHI database.

This function was introduced in PCR Phase 9 to primarily support the creation of patient records for the smoking cessation service.

To search for a CHI Number:

- Navigate to the Patient details page by selecting the link as described in section 3.3.

The default state of the patient details page highlights what information is mandatory for CHI search, Figure 3-6. (using greyed-out text "Mandatory for CHI search" within the text input boxes)

4 Pharmaceutical care plans

4.1 Overview

The patient home page is the starting point for entering any information associated with a patient's Pharmaceutical Care Plan (PCP). On creation of a new patient record (Section 3) a "blank" PCP is automatically created.

There are four main sections in the PCP:

- Patient Profile
- Medication Profile (otherwise referred to as a Pharmaceutical Care Risk Assessment)
- Pharmaceutical Care Issues, Care Issue Outcomes and Actions
- Medication History

The NES Chronic Medication Service Implementation Resource Pack explains the practice elements of pharmaceutical care planning and how to complete the relevant information in each of the above four sections of the PCP. The information in this User Guide focuses on the practicalities of entering and recording information into the care plan.

4.2 Patient profile

The patient profile section of the patient home page (Figure 4-1) is used to record specific information about a patient’s health.

Patient Profile		
Named Pharmacist		
Additional Information		
General Health		
Medical Conditions		
Allergies and Sensitivities		
Diagnosed coeliac (historical)		Not Recorded
Gluten-free diet		Not Recorded
Complex dispensing patient		Not Recorded

Patient Profile Last Modified: 10-Oct-2013 by Testuser

[Review/Edit](#)

Figure 4-1: Patient Home: Patient profile section

The patient profile is organised into the following categories that can all be edited on the same page:

- Named Pharmacist (responsible for Pharmaceutical Care Plan)
- Additional Details (of named pharmacist)
- General Health
- Medical Conditions
- Allergies and sensitivities

Diagnosed coeliac (Historical)

Gluten-free diet

Complex dispensing patient

- Is the patient a complex dispensing patient?

- Complex dispensing subcategories (If signified as complex dispensing patient)

Patient Factors

- *Dispositions*
 - Compromised oral route of administration
 - Physical impairment
 - Visual impairment
- *Organ function*
 - Hepatic function
 - Renal function
 - Lung function
 - Immune system
- *Maternal*
 - Pregnant
 - Breast Feeding
 - Notes

Pharmaceutical Care Plan Priority

- PCP Priority
- Notes

Initial assessment complete

- Initial assessment complete (checkbox)

Named Pharmacist responsible for Pharmaceutical Care Plan

Contains details of the pharmacist who is responsible for the patient's PCP and any specific contact details for the pharmacist.

You can enter this data as free-text and also create line breaks by using the "Enter" key.

Patient Profile

Record information about the patients general health, medical conditions and allergies.

Diagnosed Coeliac (historical)

"Diagnosed Coeliac" was used in the previous version of PCR. As not all patients that are following a gluten-free diet are Diagnosed Coeliac It has been marked as "historical" and superseded by "Gluten-free diet". The "Diagnosed Coeliac (historical)" is for informational purposes and is read only.

Gluten-free diet

Use this section to signify if patient is following a gluten-free diet, how many units they have allocated based on guidelines and if the number of units is dietitian advised. The gluten-free diet options are.

- Not Recorded (*default option*)
- No
- Diagnosed coeliac
- Diagnosed coeliac and Dermatitis Herpetiformis
- Dermatitis Herpetiformis
- Undiagnosed

Complex dispensing patient

Use this option to signify if a patient is identified as a complex dispensing patient. Options are Yes, No or Not recorded (Default). If "Yes" is selected, one or more of the five sub categories must be selected:

- Monitored dosage system required by pharmacist
- Monitored dosage system requested by prescriber / social services / hospital
- Other adherence support required (e.g. MAR sheet)
- Instalment dispensing requested by prescriber
- Special monitoring and feedback required

Patient Factors: Dispositions, Organ function, Maternal

Record any relevant patient factors. This can include information about impaired organ function or visual impairment – marking each of the factors as 'Yes', 'No', 'Not Applicable' or 'Not Recorded'. Again you can enter any applicable free-text information associated with each patient factor.

Pharmaceutical Care Plan Priority (PCP)

A PCP priority can be recorded to assist with the recording of a Care Plan Priorities (Figure 4-2). Possible values for PCR Priority are:

- Not Recorded (Default value)
- Low
- Medium
- High
- Not Required

Pharmaceutical care plan priority

PCP Priority: Not Recorded ▼

Notes

Initial assessment complete:

Save Cancel

Figure 4-2: PCP Priority

Initial assessment complete checkbox

The Initial assessment complete checkbox allows a positive indicator to be set that identifies when the patient’s initial assessment has been completed.

Note: The Initial assessment complete box can only be checked if the PCP Priority has been changed from the default value of “Not Recorded”.

Once the Initial assessment complete box has been checked and the patient’s PCR recorded saved the box cannot be unchecked.

To edit the patient profile:

- Select “Review/Edit” link from the patient home page (Figure 4-3), the patient profile edit page is displayed (Figure 4-4).

The screenshot shows a patient profile page with the following details:

- maternal:**
 - Patient is Pregnant Not Applicable Detail available
 - Breast Feeding Not Applicable Detail available
- Pharmaceutical Care Plan Priority:** Not Recorded Detail available
- Patient Profile Last Modified: 03-Dec-2008 by Initial User
- Review/Edit** (highlighted with a dashed blue box)

4.3 Pharmaceutical care risk assessment

The Pharmaceutical care risk assessment represents a snapshot assessment of the patient's situation in relation to their therapy and subsequent impact on their pharmaceutical care.

Note: All questions in the Pharmaceutical care risk assessment must be completed before it can be saved.

To create a Pharmaceutical Care Risk Assessment

- Select the "Add" link at the bottom right hand side of the Pharmaceutical care risk assessment section on the "Pharmaceutical care plan" tab. (Figure 4-7)

Duplication of medication?	<input type="radio"/> Yes <input type="radio"/> No <input type="radio"/> Not Recorded	<input type="text"/>

Summary:
 Are there any pharmaceutical care issues of note? Yes No Not Recorded

Figure 4-8: Care risk assessment entry page

- Answer Yes, No or Not recorded to each question (If required, free-text notes can be added alongside each question).
- Once all the questions have been answered you must indicate if you believe that there are any care issues of note. As before, you are given a choice of 'Yes', 'No', or 'Not Recorded' options. A multi-line text box is also available for any notes that may supplement your choice.

- When you have completed the entire list of questions click the "Save" button, if any of the Pharmaceutical Care Risk Assessment questions have not been completed they will be highlighted (Figure 4-9) and you must complete them before you can save the data. When you select the "Save" button, the details are saved and the patient home page is displayed.

To exit without saving any changes:

- Select the "Cancel" button, no details are saved and the patient home page is displayed)

Note: You cannot edit the care risk assessments at a later date (it is a snapshot at a particular point in time). If there are changes in a patient's situation then you need to create a separate care risk assessment.

Figure 4-11: Care risk assessment - Read only

4.4 Pharmaceutical care issues, outcomes and actions

The pharmaceutical care plan is progressively built using pharmaceutical care issues that are identified for a patient. The PCP has a section for entering care issues. You also record the desired outcome for the care issue, any actions required to deliver the outcome, the current status of the outcome and apply a review by date to each outcome.

There are four types of care issues:

- Standard
- High risk medicine
- New medicine
- Gluten-free

Note: A pharmaceutical care plan uses the type "Standard" only.

To create a standard care issue for a patient:

Care Issues				
Care issue	Care issue type	Earliest review by	Last modified on	
> Asthma Inhaler Technique	Standard	01-Feb-2010	03-Dec-2008	View
> Increased Asthma Attacks	Standard		03-Dec-2008	View
> Medication Use Review	Standard		03-Dec-2008	View
> Allergy Review	Standard		03-Dec-2008	View

5 High risk medicine care risk assessments

5.1 Overview

A high risk medicines care risk assessment allows healthcare professionals to record information about a patient's use of a particular medicine type. At present a High risk medicine care risk assessment can be completed for Methotrexate, Lithium, or Warfarin.

The functionality consists of a series of grouped questions, answers and supporting protocol guidance. The capability supports the capture and recording of the answers in line with the provided protocol.

The questions are grouped into the following sections:

- Concordance;
- Interactions and precautions;
- Adverse reactions; and
- Monitoring

A patient can have multiple high risk medicine care risk assessments over time.

Sections can be answered in sequence or be completed individually and reviewed and updated from the review page. Not all sections of the assessment need to be completed at the same time. Individual sections can be completed, saved and returned to at a later date.

Care issues and care issue outcomes can be associated with a high risk medicine care risk assessment; these can be viewed alongside standard care issues as well as with the associated high risk medicine care risk assessment.

A high risk medicine care risk assessment care issue and care issue outcome can be created with prepopulated text based on the context of an individual question. They can also be created independent of the questions – without prepopulated text.

The high risk medicine care risk assessment supports the concept of a status – Open or Completed. Care issues and care issue outcomes can continue to be added and updated to a completed high risk medicine care risk assessment.

5.3 Start a HRM Care Risk Assessment

Step 1 - start a high risk medicine care risk assessment:

- Identify the patient you want to create a high risk medicine care risk assessment for and go to the patient home page.
- Select the "High Risk Medicine Assessment" tab (Figure 5-1)

High risk medicine care risk assessment

Please select the high risk medicine

Methotrexate

Figure 5-2: Drug Selection

Note: "Methotrexate" used in this User Guide example.

High risk medicines care risk assessment

Please select the high risk medicine

Methotrexate ▼

Start Cancel

Figure 5-3: Select high risk medicine

- Click the "Start" button (Figure 5-3)
- The system will navigate to the Methotrexate "Concordance" questions page (Figure 5-4)

Note: By selecting the "Start" button (Figure 5-3), creates a new high risk medicine care risk assessment within PCR.

Selecting the "Cancel" button (Figure 5-3) returns the system to the patient home page – a high risk medicine care risk assessment is not created.

5.4 Create a high risk medicine care risk assessment

Having completed the steps in section 5.2, this section guides you through the procedure to create and save a high risk medicine care risk assessment.

Step 1 - Answer "Concordance" questions:

- Provide an answer to all questions on the Concordance page by selecting either 'Yes' or 'No' for each question (Figure 5-4).

[HRM Methotrexate Process](#) > **Concordance** > [Interactions & precautions](#) > [Adverse reactions](#) > [Monitoring](#) > [Review](#)

Concordance

Is the patient taking their methotrexate as prescribed? Yes No

Does the patient know what to do if they miss a dose of methotrexate or vomit after taking a dose? Yes No

If the patient is taking folic acid are they taking it as prescribed? Yes No

Does the patient have a methotrexate patient information and monitoring booklet and do they use it? Yes No

When indicated for RA and psoriasis methotrexate is prescribed as a single dose taken **once a week** on the **same day** each week. 'As directed' instructions should be avoided. You should follow up with the patient's GP practice if the instructions printed on the prescription form do not match what the patient tells you.

Actions:

Check the patient's understanding of how and when to take their methotrexate and clarify any discrepancies.

If the patient is currently receiving methotrexate 10 mg (either alone or in combination with the 2.5 mg tablets) then discuss the merits of using a single strength of 2.5 mg. If patient is content to change contact their GP to discuss the change

Advise the patient that methotrexate should be swallowed whole and not crushed or chewed.

Check the patient's understanding of how and when to take their folic acid and clarify any discrepancies.

Advise the patient to carry and use the methotrexate booklet.

Record any care issues in the patient's care plan and agree desired outcomes and actions.

[return to Methotrexate Review Page](#)

Figure 5-4: Methotrexate "Concordance" as example

User Options:

- Select the "Next – Interactions & Precautions" button; The system will save entered data and navigate to the "Interactions & Precautions" screen; or
- Select the "Save & Review" button; The system will save entered data and navigate to the "Review" screen for the selected high risk medicine

Note:

All questions are mandatory. If an answer is not selected an error message will be displayed when either the "Next" or "Save & review" buttons are selected, (Figure 5-5).

It is not possible to navigate to the next questions screen or the "review" screen unless an answer is provided for each question.

Concordance

Is the patient taking their methotrexate as prescribed? Yes No
Required

Does the patient know what to do if they miss a dose of methotrexate or vomit after taking a dose? Yes No
Required

If the patient is taking folic acid are they taking it as prescribed? Yes No
Required

Does the patient have a methotrexate patient information and monitoring booklet and do they use it? Yes No
Required

When asked to follow the instructions for action if the medication

Figure 5-5: Error message – mandatory information

Step 2 Answer "Interactions & Precautions" questions:

Note: The Interactions & Precautions questions screen can be navigated to from the "Concordance" screen or directly from the review page if the High Risk Medicine Care Risk Assessment has already been created and saved.

- Select an answer for each of the questions on the Interactions & Precautions screen (Figure 5-6)

HRM Methotrexate Process : Concordance > **Interactions & precautions** > Adverse reactions > Monitoring > Review

Interactions and precautions

Is the patient aware they should check that any newly prescribed medicines don't interact with methotrexate? Yes No

Is the patient aware that certain OTC medicines can interact with methotrexate? Yes No

Serious drug interactions include:

Acitretin and Sulfipyrazone

Chloramphenicol, co-trimoxazole, probenecid and trimethoprim

Consider the need for contraceptive and family planning advice.

Action:

Advise the patient to always check with their GP and pharmacist that any new medicine, including OTC, is safe to take with methotrexate.

Record any issues in the patient's care plan and agree desired outcomes and actions.

[HRM Methotrexate Process](#) > [Concordance](#) > [Interactions & precautions](#) > **Adverse reactions** > [Monitoring](#) > [Review](#)

Adverse reactions : side effects and toxicity

Is the patient aware of the common side effects of methotrexate?	<input type="checkbox"/>	<input type="checkbox"/>	Yes	No
Is the patient aware of the side effects that occur if they are having a reaction to methotrexate?	<input type="checkbox"/>	<input type="checkbox"/>	Yes	No
Is the patient aware of what to do if they are suffering from these signs?	<input type="checkbox"/>	<input type="checkbox"/>	Yes	No
Is the patient aware that adverse reactions should be reported?	<input type="checkbox"/>	<input type="checkbox"/>	Yes	No

The most common side effects are:

- Skin (e.g. urticaria, acne, photosensitivity)
- Haematopoietic reactions (e.g. anaemia, pneumonia, septicaemia)
- Alimentary tract (e.g. nausea, vomiting, gingivitis, pharyngitis, intestinal ulceration)
- Hepatic (e.g. acute hepatitis or cirrhosis)
- Urogenital (e.g. vaginal discharge or ulcers, cystitis, dysuria)
- Pulmonary (e.g. acute pulmonary oedema, fibrosis)
- CNS (e.g. headache, drowsiness or blurred vision)
- Cardiac (hypotension, deep vein thrombosis)

Actions:

- Check the patient's understanding of the side effects of Methotrexate using the information booklet as a prompt.**
- Ask the patient if they are experiencing any side effects.**
- Refer them to their GP if side effects appear severe.**
- Record any care issues in the patient's care plan and agree desired outcomes and actions.**

Signs of methotrexate toxicity or intolerance are:

- Breathlessness
- Dry persistent cough
- Severe vomiting or diarrhoea
- Sore throat or mouth ulcers
- Unexplained bleeding or bruising
- Abdominal discomfort
- Dark urine

Actions:

- Check the patient's understanding of the signs of methotrexate toxicity using the information booklet.**
- Remind the patient that they should tell the pharmacist, GP or specialist if they experience any side effects that could indicate toxicity.**
- Immediately refer the patient to their GP if they are showing signs of toxicity, contacting their GP to alert them. Patients with signs of pneumonitis must stop methotrexate and seek urgent hospital attention.**
- Advise the patient to report any adverse drug reactions through the MHRA Yellow Card Reporting Scheme either via yourself or by them self reporting.**
- Record any care issues in the patient's care plan and agree desired outcomes and actions.**

HRM Methotrexate Process > Concordance > Interactions & precautions > Adverse reactions > Monitoring > Review

Monitoring

Is the patient aware of how frequently they should have their blood tests done? Yes No

Can the patient tell you the date of their last blood test and, if so, when was it? (Record the date or approximate date if known. Otherwise record "No")

Does the patient record their blood results in their methotrexate monitoring booklet? Yes No

Methotrexate has a narrow therapeutic index. Monitoring is very important. Patients should know who is responsible for the prescribing and monitoring of their methotrexate. You should expect to find monitoring will be

three monthly for people stable on methotrexate for years and with no co-morbidities

four to eight weekly for those in the first couple of years of being on a stable dosage or co-morbidities in long-term users.

weekly - fortnightly for those just started.

Actions:

Establish if the patient is receiving regular monitoring.

If the patient has not had their blood levels monitored within an appropriate timescale refer them to their GP practice for monitoring, contacting the GP to alert them.

Advise the patient to discuss their monitoring arrangements with their GP or practice nurse if there appears to be confusion about the interval.

Encourage the patient to check their results are normal with their GP or practice nurse after each test and record the results in their monitoring booklet.

Encourage the patient to carry their methotrexate booklet.

Record any care issues in the patient's care plan and agree desired outcome and actions.

[return to Methotrexate Review Page](#)

WILLIAMS, Steven (Mr) Born **15-Feb-1945 (66y)** Gender **Male** CHI No. **1111111111**
Patient Details Last Modified On **05-Jan-2012** By **Testuser**

Address **5 Oakbank Avenue, Glasgow, G12 3NR** Phone and email **01415554444**

HRM Methotrexate Process : **Concordance** > [Interactions & precautions](#) > [Adverse reactions](#) > [Monitoring](#) > [Review](#)

Concordance

Is the patient taking their methotrexate as prescribed? Yes No

Does the patient know what to do if they miss a dose of methotrexate or vomit after taking a dose? Yes No

If the patient is taking folic acid are they taking it as prescribed? Yes No

Does the patient have a methotrexate patient information and monitoring booklet and do they use it? Yes No

When indicated for RA and psoriasis methotrexate is prescribed as a single dose taken **once a week on the **same day** each week. 'As directed' instructions should be avoided. You should follow up with the patient's GP practice if the instructions printed on the prescription form do not match what the patient tells you.**

Actions:

- Check the patient's understanding of how and when to take their methotrexate and clarify any discrepancies.**
- If the patient is currently receiving methotrexate 10 mg (either alone or in combination with the 2.5 mg tablets) then discuss the merits of using a single strength of 2.5 mg. If patient is content to change contact their GP to discuss the change**
- Advise the patient that methotrexate should be swallowed whole and not crushed or chewed.**
- Check the patient's understanding of how and when to take their folic acid and clarify any discrepancies.**
- Advise the patient to carry and use the methotrexate booklet.**
- Record any care issues in the patient's care plan and agree desired outcomes and actions.**

Figure 5-20: Read only – completed assessment

Note: All data for a completed HRM Care Risk Assessment is shown as read only (Figure 5-20). This means that responses for a completed HRM Care Risk Assessment cannot be edited; however, it is still possible to add a Care Issue / Care Issue Outcome to a completed HRM Care Risk Assessment.

6 New medicine interventions

6.1 Overview

The New Medicine Interventions allows healthcare professionals to create and maintain an intervention record for patients that have a newly prescribed medicine. This functionality allows users to:

- Start a new medicine intervention record where you record the medication details, indication, instructions and service type
- Create and maintain an initial intervention record
- Create and maintain one or more follow-up intervention records
- Associate care issue / care issue outcomes to a new medicine intervention record
- Complete a new medicine intervention record

6.2 Start a new medicine intervention

To start a new medicine intervention:

- Select the "New Medicines Interventions" tab on the patient home page (Figure 6-1)
- Select the "Start new medicine intervention" link, the "enter medication details" page will be displayed (Figure 6-2)

Medicine * Means a field requires data

Medicine detail *

Instructions

Service

Indication

Figure 6-2: Medication details page

The table below shows an example of data to be entered in the medication details page.

Item	Example
Medicine detail (Name, Strength and Form)	Aspirin 75mg Tablets
Instructions	Take ONE Tablet Daily
Service	Select from list: CMS or AMS. Note the list also includes MAS, CPUS, OTC or other; it is not expected that any of these latter categories will be used for the New Medicine Intervention service.
Indication	Angina

- Select the "Start" button, the "Initial Intervention" entry page will be displayed.

6.5 Enter answers to initial intervention questions

The Initial intervention entry page is shown in (Figure 6-3)

To enter answers to initial intervention questions:

- Confirm or select intervention date in the "Intervention" record section of the page (Figure 6-3).

Note: The Intervention date will default to today's date. If you have gathered the information from the patient on a different date you can use the date picker to change this.

- Provide answers to initial intervention questions by selecting Yes, No or Not Recorded (Free text notes can be added to each question)
- Select the "Record & Review" button, the new medicines interventions review page is displayed (Figure 6-4)

[return to Patient Home Page](#)

Figure 6-4: New Medicines interventions review page

Options from the new medicines intervention review page are:

- Schedule a follow-up intervention
- Edit a follow-up intervention (If one exists)
- Edit an initial intervention
- Add a care issue / care issue outcome and associate with a new medicine intervention record
- Selecting a reason for completion and set status to completion

Note: If intervention is set to complete. Data on the review page is read only. However, it is still possible to create care issues for a completed intervention.

6.7 Schedule a follow up intervention

Having started an initial intervention (see section 6.2) you can create subsequent follow-up intervention records.

An "In person" follow up intervention is when the patient will visit the pharmacy to provide follow up information on the use of their newly prescribed medicine. Alternatively, the follow up intervention can be conducted "By telephone".

To schedule an "In person" follow up intervention:

- Select the "Schedule follow up" link from the new medicine interventions review page (Figure 6-5), the system will display a "Schedule follow up" pop up form (Figure 6-6)

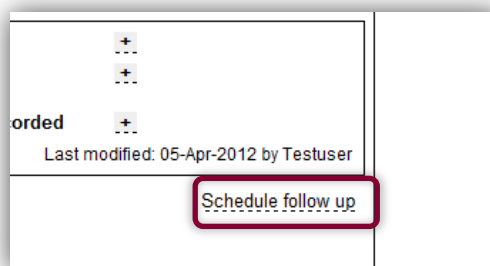

Figure 6-5: "Schedule follow up" link

- Use the date picker in the pop up form (Figure 6-6) to select the date you have agreed with the patient for the follow up intervention to take place,
- Add free text details of the timeslot if required (e.g. after 1pm)
- Select "In person" as the contact method

Figure 6-6: Schedule follow up pop up dialogue

- Select the "Schedule follow up" button on the pop up form, the follow up intervention will be added to PCR and the new medicine interventions review page will be refreshed to show the "In person" follow up record that has been created (Figure 6-7)

Schedule follow up																							

Figure 6-7: Follow up record shown on review page

To schedule a “By Telephone” follow up intervention:

- Select the “Schedule follow up” link from the new medicine interventions review page (Figure 6-5), the system will display a “Schedule follow up” pop up form (Figure 6-6)
- Use the date picker in the pop up form to select the date you have agreed with the patient for the follow up intervention to take place
- Add free text details of the timeslot, if required (E.g. after 1pm)
- Select “By telephone” as the contact method, the pop up form will automatically extend to display existing contact telephone information and a box to add an alternative contact telephone number (Figure 6-8)

Figure 6-8: Schedule follow up “ By Telephone”

Note: Date and timeslot are mandatory

User Options

- Use the arrow buttons (⊕) to copy an existing telephone number (held in the patient profile) for the patient to use as the contact number for the follow up intervention; or
 - Enter another number in the “contact number” box to use for the follow up intervention record.
- Select the “Schedule follow up” button on the pop up form, the follow up intervention will be added to PCR and the new medicine interventions review page will be refreshed to show the “By telephone” follow up record that has been created, this will be identical to that shown in Figure 6-7 with the exception that the contact preference is set to ‘By Telephone’ and the contact number is displayed.

6.8 Complete a follow up intervention

Having already scheduled a follow up intervention, use the following procedure when the patient has been successfully contacted by Telephone or is present in the pharmacy.

Note: You may decide to record the follow-up intervention details offline while speaking to the patient and update PCR later. If this is the case it is very important that the "intervention date" represents the date you actually recorded the information and not when you updated PCR.

To complete a follow up intervention:

- Identify the patient in PCR and navigate to the review/summary page of the New Medicine intervention and select the follow-up link shown in Figure 6-9.

Notes

Is this follow up intervention complete? Yes No

Figure 6-10: Edit follow up intervention details

Editing options

To change the scheduled date only:

You may decide to edit the follow up intervention to change the scheduled date only.

- Enter new scheduled date
- Select the "Record & Review" button to save your answers and return to the new medicine intervention review page, Figure 6-11.

To answer the follow up questions:

- Confirm that the intervention date is correct. This is the date you met with the patient in person or spoke to the patient by phone. The intervention date will always default to "Today". You may need to change it if you are entering the details retrospectively.
- Answer the first six follow up intervention questions using the radio buttons: 'Yes', 'No' or 'Not recorded'. You may optionally add text notes against each question:
 - Has the patient started to take the medicine?
 - Is the patient still taking the medicine according to the instructions?
 - Has the patient missed any doses of the medication or changed how they take it?
 - Is the patient having any problems with the medication?
 - Is there anything else that the patient would like to know about the medicine?
 - Does the patient require another follow up intervention?
- Answer the final question using the radio buttons: 'Yes' or 'No' only.:
 - Is the follow up intervention complete?

Note: If you answer yes to the final question this is only an indication that you are satisfied the intervention is complete. This will not complete the overall intervention and all questions can still be edited. To complete the overall intervention see section 6.10.

User options:

- Select the "Record & Review" button to save your answers and return to the new medicine intervention review page, Figure 6-11
- Select the "Cancel" button to exit without saving any changes and return to the new medicine intervention review page.

6.9 Add care issue / care issue outcome

Care issues and care issue outcomes can be added from links within the new medicine interventions review page. There are two options to consider when adding a care issue / care issue outcome:

- Associate with new medicine intervention
- Associate with new medicine intervention based on the context of an intervention question

Note: All care issues are associated to the intervention record not the question.

To add a care issue / care issue outcome:

- Select the "Add" link at the bottom right hand side of the care issues section of the new medicine interventions review page (Figure 6-12)

Figure 6-12: Care issues associated with a new medicine intervention

- The "Record care issues for new medicine intervention" page will be displayed (Figure 6-13)

- Enter the details of the care issue and care issue outcome and click the “Save” button.

- The care issue and care issue outcome information is saved in PCR and the new medicine intervention review page is displayed. A summary of the added care issue is shown on the review page (Figure 6-14)

Note: Selecting the cancel button will display the new medicine interventions review page - no data will be saved.

6.10 Complete a new medicine intervention record

A new medicine intervention can be completed in the following circumstances:

- Patient is adhering
- Patient is not adhering
- Patient lost to follow up

To set the status of a new medicine intervention to complete:

- Select a reason from the dropdown menu in the "Intervention Completion" section of the review page (Figure 6-17).

Follow up

Scheduled date	Monday, March 26, 2012
Intervention date	Not set
Contact preference	By telephone on 01506 000-000
Time slot preference	Call after 1pm
Has the patient started to take the medicine?	Unanswered +
Is the patient still taking the medicines according to the instructions?	Unanswered +
Has the patient missed any doses of the medicine or changed how they take it?	Unanswered +
Is the patient having any problems with the medicine?	Unanswered +
Is there anything else that the patient would like to know about the medicine?	Unanswered +
Does the patient require another follow up intervention?	Unanswered +
Is this follow up intervention complete?	Unanswered +

7 Gluten-free support tool assessment

7.1 Overview

This support tool assessment allows pharmacists to manage information about patients that are following a Gluten-free diet. At present, "Gluten-free" is the only support tool assessment.

The assessment consists of a series of grouped questions, answers and supporting protocol guidance. The capture and recording of the answers is in line with the provided protocol.

The questions are grouped into the following sections:

- Concordance
- Interactions and precautions
- Adverse effects
- Monitoring

A patient can have multiple Gluten-free support tool assessments over time.

Sections can be answered in sequence, completed individually, and reviewed and updated from the review page. Not all sections of the assessment need to be completed at the same time. Individual sections can be completed, saved and returned to at a later date.

Care issues and care issue outcomes can be associated with Gluten-free support tool assessments; these can be viewed alongside standard care issues as well as with the associated Gluten-free support tool assessments.

A Gluten-free support tool assessment care issue and care issue outcome can be created with prepopulated text based on the context of an individual question. They can also be created independent of the questions – without prepopulated text.

A Gluten-free support tool assessment supports the concept of a status – Open or Completed. care issues and care issue outcomes can continue to be added and updated to a completed Gluten-free support tool assessment.

7.2 Start a Gluten-free Support Tool Assessment

To start a Gluten-free Support Tool Assessment:

- Select the "Support tools" tab on the patient home page (Figure 7-1) (Figure 6-1)
- Select the "Start support tool assessment" link, the "Support tool selection" page will be displayed (Figure 7-2)

Support tool assessment

Please select the support tool

Gluten-free

Figure 7-2: Support tool selection

By selecting the "Start" button (Figure 7-2), this will create a new Gluten-free support tool assessment within PCR. Selecting the "Cancel" button will return the system to the patient home page – a Gluten-free support tool assessment will not be created.

7.3 Create a Gluten-free support tool assessment

Having completed the steps in section 7.2, this section guides you through the procedure to create and save a Gluten-free support tool assessment.

All questions are mandatory. If an answer is not selected an error message will be displayed when either the "Next" or "Save & review" buttons are selected. It is not possible to navigate to the next questions screen or the "review" screen unless an answer is provided for each question.

Protocol guidance text is displayed on the right-hand side of each question page.

Step 1 - Answer "Concordance" Questions:

- Provide an answer to all questions on the "Concordance" page by selecting either 'Yes' or 'No' for each question, Figure 7-3.

Monitoring

Is the patient aware of how many gluten-free units they are able to order each month? Yes No

Gluten-free annual health check not completed in pharmacy

What date is the patient due to receive their gluten-free annual health check at the pharmacy?

Height or weight or both not available

Height (m)

Weight (kg)

BMI

There are national recommendations for the number of monthly gluten-free units; these vary by age and gender. The amount of gluten-free units patients are given should meet their dietary needs.

Patients should be monitored periodically to ensure that they maintain a healthy weight. Some patients may have a blood test at intervals by their general practitioner to ensure that the patient is not showing signs of malabsorption

Actions:

Communicate the information gained from the annual health check to the patient's general practitioner.

Record any care issues in the patient's care plan and agree desired outcome and actions.

[return to Gluten-free Review Page](#)

Figure 7-6: Monitoring

Gluten-free annual health check date is mandatory unless "Gluten-free annual health check not completed in Pharmacy" checkbox is selected.

Height and weight are mandatory unless "Height or weight or both not available" checkbox is selected.

User Options:

- Select calculator icon to calculate BMI (if height and weight entered).
- Select the "Back – Adverse effects" button; The system will navigate to the "Adverse reactions" page.
- Click the "Save & Review" button. The system will navigate to the "Summary" page, Figure 7-7

Care issues associated with the assessment are shown below the questions summary.

The assessment completion status is shown at the bottom of the page.

7.5 Create associated care issue and Care Issue Outcomes using prepopulated text

Selecting a link next to a question on the Gluten-free summary page will populate the care issue with default text.

Note: This option does not mean that the care issue is associated with the actual question – the association is at assessment level.

Step 1: Select link

- Select a  link for the question on the Gluten-free Summary page that you want to create a care issue / care issue outcome for, (Figure 7-8)

Figure 7-8: Add Care Issue / Care Issue Outcome link

- The system will display the support tool assessment "Record care issue" page (Figure 7-9)

[Gluten-free assessment](#) **Concordance** > [Interactions & precautions](#) > [Adverse effects](#) > [Monitoring](#) > [Review](#)

Concordance

- Is the patient adhering to their gluten-free diet?
- Does the patient understand how to identify foods that may contain gluten?
- Does the patient have information that will support their concordance with a gluten-free diet?

Yes No
 Yes No
 Yes No

Read only

Coeliac Disease is an autoimmune condition. Ingesting gluten causes the villi of the small intestine to react by flattening. This reduces the absorptive capacity of the intestine.

Actions:

- Check the patient's feelings about how they are managing with their diet.**
- Check if the patient is confident that they can identify foods that contain gluten.**
- Enquire if the patient is aware of the symptoms caused by eating gluten. There is wide variation in the severity of symptoms; some patients do not experience any symptoms.**
- Signpost the patient to Coeliac UK (www.coeliac.org.uk).**
- Record any care issues in the patient's care plan and agree desired outcomes and actions.**
- Refer to the community dietitian, patient's GP, or as per healthboard guidelines.**

Figure 7-16: Read only – completed assessment

Note: All data for a completed Gluten-free support tool assessment is shown as read only (Figure 5-20). This means that responses for a completed Gluten-free support tool assessment cannot be edited; however, it is still possible to add a Care Issue / Care Issue Outcome to a completed Gluten-free support tool assessment.

8 Smoking Cessation Support Tool Assessment

8.1 Overview

8.1.1 Background

The Scottish Government wish to improve the number of successful quit attempts and to increase the level of responses to minimum dataset questions to the national smoking cessation database. To enable this, the Pharmacy Care Record (PCR) has been updated to provide a consistent electronic solution to support community pharmacies in the recording and management of national smoking cessation quit attempts. Additionally, PCR will support the pharmacy in capturing, validating and electronically submitting the national smoking cessation minimum dataset (MDS).

Smoking cessation is a service currently delivered by community pharmacists in all NHS Scotland health board areas. The service involves engaging with patients who wish to stop smoking by recording information about them, their tobacco use, and previous quit attempts.

The smoking cessation support tool function in PCR provides pharmacists with a function to record information about a patient who wants to stop smoking. Information recorded in PCR aligns with the Smoking Cessation Minimum Dataset and is submitted to the national smoking cessation database at specific intervals in the quit attempt.

8.1.2 PCR smoking cessation support tool assessment overview

The smoking cessation support tool assessment will allow the user to:

- Start a smoking cessation support tool assessment
- Record initial data capture MDS information
- Confirm quit date and submit MDS Start
- View and maintain initial data capture
- View, maintain and submit 4 and 12 week MDS information
- View and record patient contacts
- View and record patient contact attempts
- Validate MDS information prior to submission
- View MDS submission deadline alerts
- Submit 4 and 12 week MDS information for external processing
- View smoking cessation reports

8.1.3 Key information

- A unique reference is created for each quit attempt when the quit date is confirmed.
- The MDS submission deadlines are calculated in number of weeks from the quit date
- It is not possible to submit a twelve week MDS if the quit attempt failed at the four week follow up.
- A submission will expire and will not be able to be submitted via PCR if not completed within the allowable submission window.

8.2 Start Smoking Cessation Support Tool Assessment

To start a Smoking Cessation Support Assessment:

(Log into PCR and identify the patient that you want to create the assessment for. You may need to create a new patient)

- Select the support tools tab (on the patient home page) and click the "Start support tool assessment" link. The support tool assessment options page is displayed, Figure 8-1.

8.3 Initial Data Capture

The Initial Data Capture page allows the user to enter or select the following information:

- Consent
- Client Information
- Tobacco use and quit attempts
- Pharmaceutical usage
- Referral and intervention context

Information entered or selected on the Initial Data Capture page can be saved even if some items are incomplete or missing. However, they all need to be completed before the quit date is set.

To record Initial Data Capture:

- Select, or where applicable enter text, for all sections of the Initial Data Capture - or as much as is known.
- Click save, the Review Page is displayed, Figure 8-7.

Smoking cessation: initial data capture

Consent

Does the client consent to follow up? Please select

By participating in the smoking cessation service the client has agreed to be contacted by NHS Scotland representatives in order to follow up their progress and smoking status and has agreed to provide a telephone number to facilitate follow up.

Client information

Gender Male

If female, pregnant?

What is the client's ethnic group? White Scottish

If 'Other' chosen above, please specify

What is the client's employment status? In paid employment

If 'Other' chosen above, please specify

Tobacco use and quit attempts

On average, how many cigarettes does the client usually smoke per day? 10 or less

How soon after waking does the client usually smoke their first cigarette? Within 5 minutes

How many times has the client tried to quit smoking in the past year? No quit attempts

Figure 8-7: Review Page after Initial Data Capture

Below is a summary of the review page sections with information on their current state.

Initial Data Capture

A summary of the information recorded in the initial data capture is displayed on the review page. If no information was provided for a specific question this is shown as "Unanswered"

Quit date

The quit date is shown as not set. This is confirmed in the next step.

Next Action

The options in this section vary depending on the state of the assessment. After the initial data capture this will show an option to "Start Quit Attempt and Confirm quit date". (As the assessment progresses, this section will display options to submit the 4 and 12 week MDS.)

Care issues associated with this assessment

Option to add a care issue is available.

Assessment completion

Function to complete an assessment in PCR. This is independent of the MDS submission process. More details of this function are provided in section 8.15.

8.5 Start Quit Attempt and Confirm Quit Date

Starting a quit attempt will create a new quit attempt record that will have a unique identifier.

Having set the quit date, the four week and target dates for the four week and twelve week MDS submissions are calculated.

To start a quit attempt and confirm quit date

- Select "Start quit attempt and confirm quit date" form the "Next action" section, Figure 8-8. The "Confirm quit date and record intervention" page is displayed, Figure 8-9.

8.6 Confirm quit date and record contact

By default, the "Record contact" checkbox is selected. This allows you to record a "contact" at the same time as setting the quit date. If you do not want to record a contact then deselect this checkbox.

To Confirm quit date (with option to record contact):

- Enter the quit date you have agreed with the patient in the "confirm quit date and record contact" section.
- Complete contact details (date, contact type, has the patient smoked, CO reading, product, product and contact notes)
- Click the confirm quit date button, the review page is displayed

When confirm quit date is selected, any missing information is highlighted in red text: "Required".

Unique Reference

Unique reference for quit attempt.

8.8 Submit 4 Week Data

The 4 week MDS can be submitted (to the national smoking cessation database) between 4 and 6 weeks (28-42 days) after the quit date.

For example, where the quit date is set at 3pm on 1st May 2014, the first date that the 4 week submission can be is 4 weeks (28 days) later on the 29th May 2014 (at any time that day) The last time the submission can be made is up until midnight on the 12th June 2014.

It is not possible to submit the data if this 4-6 week submission window is missed. This submission includes all information recorded in the initial data capture together with additional information shown below.

To submit 4 week data:

- Select release 4 week MDS link from the next action section of the review page.
- Enter required information
- Click submit 4 week data button

There is a link to update the initial data capture details if any have changed. For example "Pharmaceutical usage weeks".

[return to Smoking Cessation Review Page](#)

Figure 8-14: Submit 4 week data validation error shown

If it is recorded that the client was not successfully contacted at the 4 week (1 month) follow up, or had smoked it will not be possible to progress to the 12 week submission.

8.9 Review Assessment Details (4 Week Data Submitted)

Now that the 4 week MDS has been submitted, the minimum dataset section shows the overall MDS status as "Validated" with the release status shown as "Submitted", Figure 8-15.

The assessment must be accessed and updated with any contacts or contact attempts that occur in the weeks leading up to the 12 week submission. Where appropriate, care issues can also be recorded.

Figure 8-15: 4 week data submitted

The "Next Action" is shown as "Release 12 week MDS". This link is not enabled until the 12 week submission window is reached (10-14 weeks from quit date).

8.10 Submit 12 Week Data

The 12 week MDS can be submitted by the pharmacy (to the national smoking cessation database) between 10 and 14 weeks (70- 98 days) after the quit date.

For example, where the quit date is set at 3pm on 1st May 2014, the first date that the 12 week submission can be is 10 weeks (70 days) later on the 10th July 2014 (at any time that day) The last time the submission can be made is up until midnight on the 07th August 2014.

It is not possible to submit the data if the 10-14 week submission window is missed. Additionally, it is not possible to submit if the client was not successfully contacted at the 4 week (1 month) follow up, or had been known to have smoked at the 4 week follow up. This includes all information recorded in the initial data capture together with additional information shown below.

To submit the 12 week data:

- Select "Release 12 week MDS" link from the next action section of the review page.
- Enter required information
- Click submit 12 week data button, the review page is displayed.

8.12 Record Contact

The patient is encouraged to keep in contact with the pharmacy weekly. A contact can be recorded at any time during the quit attempt.

To record a contact:

- Select the "Record" link at the bottom right hand side of the "Contact summary" on the review page
- Enter required information
- Click "record contact", details are saved the review page is displayed.

Figure 8-18: Record Contact

8.13 Record Contact Attempt

A pharmacy is required to make several contact attempts if necessary in order to achieve a successful follow up contact at 4 and 12 weeks. PCR provides a simple function to log contacts attempts that the pharmacy makes.

To record a contact attempt:

- Select "Record" link under the contact attempts summary on the review page.
- Enter contact attempt date and contact type
- Click record contact attempt button, details are saved and the review page is displayed.

Figure 8-20: Support tools overview

8.15 Smoking Cessation Assessment Completion

An assessment can be completed at any time at the discretion of the pharmacist. The assessment completion status is independent of the status of the smoking cessation minimum dataset submissions. This is necessary because some board areas have enhanced smoking cessation services that go beyond the 12 week MDS submission and Pharmacies may wish to keep an assessment record open beyond the 12 week MDS and to continue recording patient contacts.

As with other assessments in PCR a smoking cessation assessment must be completed before a new assessment can be begin. If a patient wanted to restart a quit attempt (because they had smoked) the pharmacy will need to complete the existing assessment (not necessarily waiting for the next MDS submission) before beginning a new one.

Valid PCR completion statuses are:

- Successful
- Unsuccessful
- Lost to follow up
- Patient died

9 Reports

9.1 Overview

Using the "Reports" function a user can obtain relevant information about patients registered in PCR for a particular pharmacy. There are five report categories:

- Care issue and patient report
- New medicine intervention support tool reports
- Complex dispensing patient reports
- Gluten-free reports
- High risk medicine assessment support tool reports
- Smoking Cessation

To access the reports page

- Select the "Reports" link from the PCR high level menu (Figure 9-1).
- The "Reports" summary page is displayed, Figure 9-2.

9.5 Complex dispensing patient reports

There are three complex dispensing patient reports, that can be accessed from links on the Reports Page.

There is one report for each flag status:

- Complex dispensing patient set to Yes
- Complex dispensing patient set to No
- Complex dispensing patient set to Not Recorded

To view a complex dispensing patient report:

- Select link form the reports page, Figure 9-2 (Separate links for Yes, No, or Not recorded)
- The report detail will be displayed, Figure 9-10.

- A count of the number of records in the report.

9.6 Gluten-free reports

Gluten-free reports are accessed from a link on the Reports Page, Figure 9-2.

The following reports are available:

- Diagnosed coeliac patients (historical)
- Gluten-free diet set to Yes
- Gluten-free diet set to No
- Gluten-free diet set to Not Recorded
- All gluten-free assessments
- All open gluten-free assessments
- All completed gluten-free assessments
- Annual health check scheduled up to 8 weeks from today
- Annual health check not completed in pharmacy

To view a Gluten-free report:

- Select link from the Reports page
- The report detail will be displayed, Figure 9-11

10 PMR interface to PCR

10.1 Overview

PMR applications have the ability to interface with PCR. Full details of the interface functionality are detailed in your PMR User Manual.

There are two specific interfaces:

- Patient interface and
- Medication history transfer

These interfaces are designed to prevent the re-keying of patient demographic data and medication dispensing history that is already present in your PMR system.

The PMR interface to PCR may only be available for patients who are registered for CMS. Links to PCR functions are therefore usually found on the Patient's CMS Registration Status / History details within the PMR.

Note: Using the Patient interface is the only way to keep the patient demographics held on the PCR consistent with those you have entered / updated on your PMR.

Figure 10-1 shows the link to PCR from the Cegedim RX Pharmacy Manager PMR. There are two buttons that are specific to PCR:

- 'Open PCR' which is the patient level interface and
- 'Export PCR History' which is used for the medication history transfer for a patient.

Figure 10-1: link to PCR from the Cegedim RX Pharmacy Manager PMR

Figure 10-2 shows the equivalent functionality in Positive Solution's Analyst PMR system. Select the 'Care Plan' button to display the following two options:

- 'View Care Plan Record' which is the patient level interface and
- 'Export PMR History' which is used for transferring the patient's medication history to PCR.

Figure 10-2: Positive Solution's Analyst PMR system

10.2 Patient interface

Having chosen a patient on your PMR who is registered for CMS (or has a registration pending status) you select the relevant option within your PMR for accessing the PCR patient interface. PCR will automatically be opened in a new window on your computer.

Note: If you are not already logged in to PCR you will need to enter your User ID and password and you must have a valid association with the pharmacy within which you are working.

Some PMRs will allow a link to PCR even if the patient is not registered for CMS

On successful login, PCR will display one of three different options depending on the status of the relevant patient's record on PCR:

- 1) If a patient record exists on PCR, the CHI number matches that of the patient selected in your PMR and all the demographic details are the same, then you will be taken straight to the patient home page for the patient you wish to view/edit.
- 2) If a patient record exists on PCR, the CHI number matches that of the patient selected in your PMR but some of the demographic details are different (as in Figure 10-3) then you will be asked if you wish to update the patient's demographics on PCR to match those held on your PMR page.

Do you want to update PCR with the information from the PMR?

Figure 10-3: PCR page highlighting differences between PMR and PCR demographic information

The patient home page will be displayed once you have chosen to update or ignore the patient demographic updates from your PMR.

- 3) If the patient does not already exist on PCR then the patient search page will be displayed and the search criteria will be pre-populated with the relevant patient’s demographic details as held on your PMR. You can modify these search criteria and research for the patient. You can also click the link that will create a new PCR record for the patient. This link will include the name of the patient to be created. Clicking on this link will automatically take you to the ‘create / edit patient details’ page and all the demographic details held on your PMR will be pre-populated on the PCR patient details page. If relevant you can then add any other additional details that may not have been held on your PMR and click the ‘Save’ button to add the patient to PCR. Once saved the patient home page will be displayed.

10.3 Medication history transfer

The medication history transfer is a two-stage process: first, you create an export file using your PMR system and then you need to import the file into PCR.

Creating the medication export file on your PMR:

The medication export file contains the last 24 weeks of dispensing history held for the patient on your PMR from the date of creating the export file. The history export file will include the following details for each item dispensed:

- Medication name
- Pharmacy service (AMS, CMS, etc.)
- Date dispensed
- Quantity dispensed
- Directions for use

The medication name will be the prescribed item name for prescriptions processed electronically (AMS, CMS and MAS). Where the prescription has not been processed from electronic data then the medication name may be the name of the dispensed product, i.e. the brand name.

To create the export file you select the relevant patient in your PMR system (note the patient must be registered for CMS), then choose the 'PMR History Export' (or equivalent) option from the PCR interface functionality on your PMR system.

Your PMR system will automatically create an export file.

Note: you need to complete the medication history transfer to PCR on the same computer as you performed the export Importing the medication import file to PCR

The export file will be named as follows: MHddmmyyxxxx.xml where ddmmyyxxxx is the patient's CHI number. If an export file already exists for a patient the file will be overwritten by any subsequent created export file.

You then click on the 'Import Medication' link. This opens a page requesting you to select the location of the export file that you previously created on your PMR.

10.3.1 Importing the medication import file to PCR

To import the medication history file to the Patient's PCR Pharmaceutical Care Plan, you search for the patient on the PMR (this can be done via PMR Patient Interface). You then click on the 'Review' link under the medications section on the patient home page. You will then be shown the "Medications" page (Figure 10-4)

Import Medications

Choose file

[return to Patient Medications page](#)
[return to Patient Home Page](#)

Figure 10-5: Import medications

When you created the export file on your PMR, your PMR will have also saved a copy of the export file's location and filename to the clipboard on your computer. If you perform the import operation immediately after creating the export file, you will not need to manually search and select the medication history export file; instead you can just use the clipboard details to define the location and filename.

If the 'Import Medications' filename area as seen in Figure 10-5, is not 'greyed out' then you can click in the box and then hold the <CTRL> key down and type 'V'. This will paste the file name and location of the export file into the box (or you can perform the same function by right clicking the mouse and choosing 'Paste').

Each of the PMR systems store the medication export files in a specific folder on your computer. Your PMR supplier will be able to advise where the medication export files are located on your computer.

Some versions of Internet Explorer include additional security checks which prevent the location and the filename of the export history file being keyed into the Import Medications filename area.

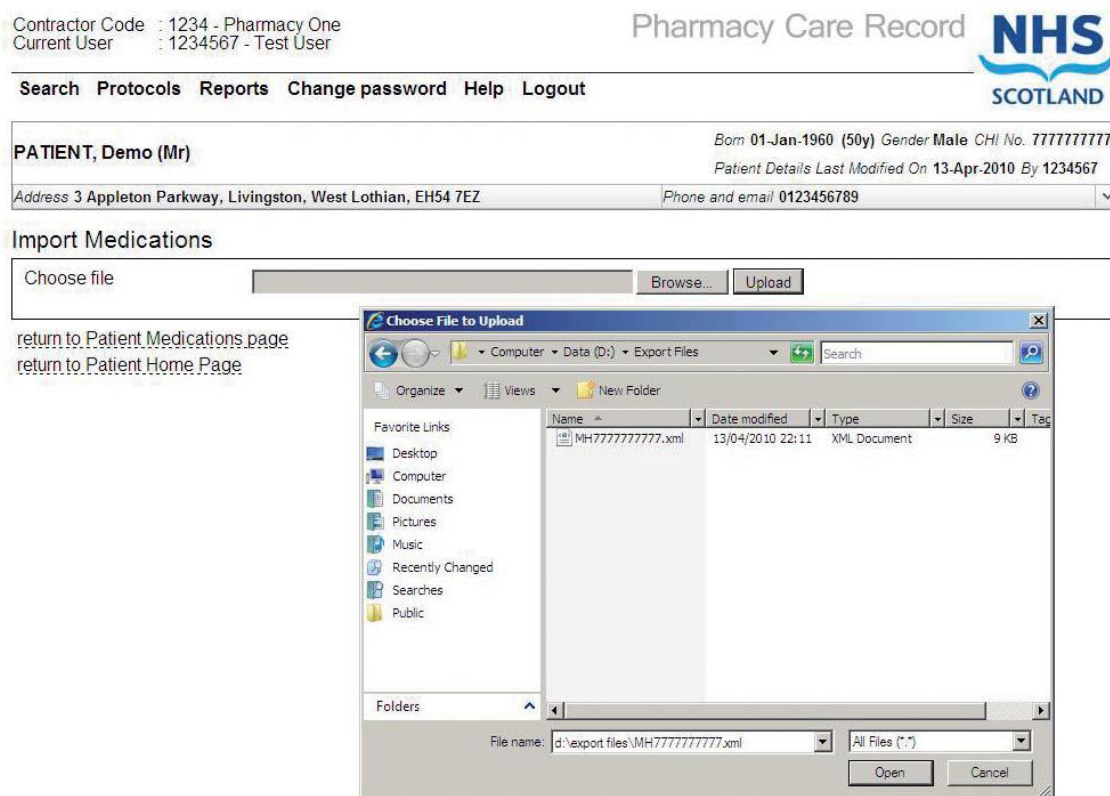

Figure 10-6: PCR medication import page and standard windows file open dialog

If the box is 'greyed out' preventing you from entering information, click the 'Browse' button shown in Figure 10-6. This will open the standard Windows file search dialogue box.

You can now manually search for the file or paste the location and filename into the filename area; hold the <CTRL> key down and type 'V' or use the mouse as described previously.

Figure 10-6 also shows the selection/input of the export filename. You then click the 'Open' button and this will copy the filename and location to the Import Medications filename area box.

Once the export filename and location has been entered on the Import Medications page you click the 'Upload' button. If the export file is a valid medication history export file the screen seen in Figure 10-7 will be displayed.

Import Medications

Are you sure you wish to import the medication data of patient PATIENT, Demo (Mr)?

[return to Patient Medications page](#)
[return to Patient Home Page](#)

Figure 10-7: PCR patient medication import confirmation page

You will now be asked to confirm that you wish to import the medication details for the patient.

PCR automatically checks that the CHI number included on the medication history export file matches that for the patient that you are currently viewing on the PCR. If the CHI number does not match then you will not be able to import the medication history details.

The patient's name detailed in the medication history export file is also displayed as an additional check to ensure that the correct patient has been selected.

You confirm that you wish to upload the medication history by clicking 'Yes' on the medication upload confirmation page.

The import process will not overwrite any existing medication history. It will add new dispensing history information (e.g. date, quantity, etc.) to any medication item and service combination that currently exists for the patient.

Once you have confirmed the uploading of the medication history you will be returned to the medication page and the imported medication will be displayed.

Figure 10-8 shows several expanded medication lines which are displayed by clicking '>' and show the dispensing history over the period of time.

Figure 10-8: several expanded medication lines

10.3.2 Editing imported medication

It is not possible to edit any medication details imported from your PCR but you can add an indication or manually add further dispensing history for a medication item. You perform these actions in exactly the same manner as editing a medication item that you have manually added. Figure 10-9 shows the addition of an indication for an item that has been imported from a PMR.

Contractor Code : 1234 - Pharmacy One

Name Atorvastatin Tabs 40MG *

Service CMS

Indication

Last dispensed on 24-Jun-2009

Imported Yes

Figure 10-9: PCR patient medication entry/edit page – editing an imported item

10.3.3 Tidying up medication export files

The export files created by your PMR system will remain on your computer after the data has been imported into the patient's record on PCR. It is advisable to delete these export files once you have completed the import process. You will recall that all these files will begin with 'MH' followed by the patient's CHI number and end with '.XML'.

These files can be removed using Windows Explorer; all files will be in the same folder but you should exercise caution to ensure that you only remove the PCR medication history export files and do not remove other files that may be required for other applications.

Appendix A: Error Messages

The following list shows the error messages that may occur when accessing the PCR User Association website to associate with a pharmacy. The list is split into technical and general errors.

Note: Each error message contains instructions on any actions you need to take. If a technical error occurs you should check in Appendix C and if after following any of the suggested actions you are still not able to associate yourself with a pharmacy you should contact the ePharmacy helpdesk.

PCR Code 101

Association Error: Technical/General Error - No valid ePharmacy certificate found. Please ensure that you are performing this operation on your main PMR server. If you are using your main PMR server please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support

PCR Code 102

Association Error: Technical Error - Certificate not accessible. Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 103

Association Error: Technical Error - Unable to sign association request. Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 212

Authentication Error: Your account is currently locked. Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 201

Authentication Error: Incorrect User ID or Password entered. Please try again, entering your correct User ID or Password

PCR Code 202

Authentication Error: Your password must be changed before attempting the association process. Please change your password and then associate yourself.

PCR Code 203

Authentication Error: You do not have permission to perform this action. Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 204

Authentication Error: Your account is suspended. Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 104

Association Error: An invalid Contractor Code was entered. If you believe the contractor code to be correct please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 105

Association Error: our Contractor Code is not valid with your ePharmacy certificate. If you believe the contractor code to be correct please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 106

Association Error: Your association request could not be verified by the PCR server (Invalid EPOC). Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 107

Association Error: Technical Error - Your association request could not be verified by the PCR server (Invalid signature). Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 108

Association Error: Technical Error - Your association request could not be verified by the PCR server (Invalid certificate). Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 109

Association Error: Technical Error - Your association request could not be verified by the PCR server (no signature present). Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 110

Association Error: Technical Error - Please check that the time and date on your PC is correct. Check and, if necessary, correct the time and date on your computer. If this error reoccurs please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 111

Association Error: Technical Error - No timestamp present in the association message. Please ensure that you have followed all the association steps in the PCR User Guide. If this issue reoccurs please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 112

Association Error: Technical Error - Your association request could not be processed. The timestamp is not in a valid format. If this error reoccurs please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 113

Association Error: An invalid Contractor Code was entered. If you believe the contractor code to be correct please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 114

Association Error: Technical Error - Your association request could not be verified by the PCR server. (no signature present). Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 300

Application Error: A general error has occurred. If this error reoccurs please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 205

Authentication Error: Incorrect User ID or Password entered when changing password or your account is locked. If you have forgotten your password please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 206

Authentication Error: You are no longer associated with a pharmacy. Please re-associate with a pharmacy before attempting to change your password.

PCR Code 207

Reset Password Error: Your new password must be at least 8 characters and contain at least 1 non-alphanumeric character. Please re-enter a new password.

PCR Code 208

Authentication Error: You do not have permission to access PCR. Please contact the PSD ePharmacy helpdesk on 0131 275 6600 or by email at NSS.PSDHelp@nhs.net for support.

PCR Code 210

Reset Password Error: Your new password must not be the same as your previous password. Please re-enter a new password.

Appendix B: Create PCR shortcut on desktop

Section 1 of the User Guide detailed the URLs (website addresses) for accessing the PCR Association website and the main PCR website. Your PMR supplier may have added icons to your computer desktop enabling you to quickly access PCR without entering the relevant URL into Internet Explorer. If you do not have the required PCR icons on your computer desktop then you can add them by following these instructions.

Note: the instructions detail the creation of an icon for the main PCR website but can be repeated for the creation of an icon for accessing the PCR Association website.

To create a PCR icon on your desktop:

- Type the PCR website <https://pcr.mhs.scot.nhs.uk> into the address bar of your browser, the PCR login page is displayed
- Right-click anywhere on the page, Internet Explorer context menu is displayed (Figure 10-10)
- Select "Create Shortcut" from the context menu

Figure 10-10:right click to "Create shortcut"

- A popup message will be displayed (Figure 10-11)

Figure 10-11: Confirm "Create shortcut"

- Select "Yes"
- A shortcut to PCR is placed on your Desktop (Figure 10-12)

Figure 10-12: PCR Icon on Desktop

Appendix C: PCR association - Common issues

Using PCR association function from a computer without an ePharmacy Certificate

The PCR association process (as detailed in section 1 of this Guide) uses the ePharmacy Certificate. This means that association can only be successfully accessed from a computer that has the ePharmacy certificate installed; in the majority of cases this will be your PMR server computer.

If you attempt to perform PCR association on a computer that does not have your ePharmacy certificate installed you will see the following error page (Figure 10-13).

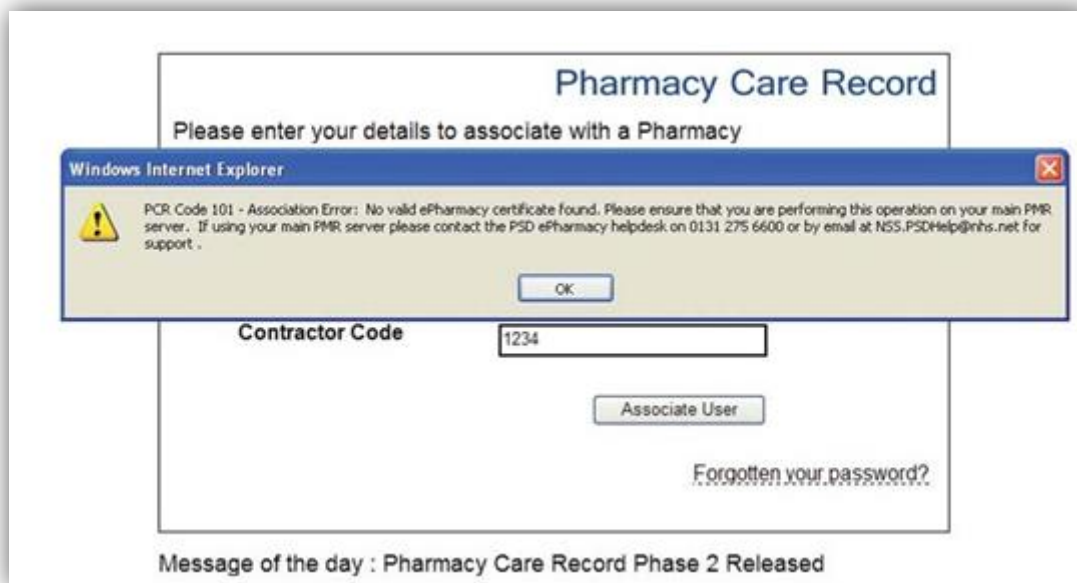

Figure 10-13: Error message if ePharmacy Certificate not present

Unable to access the PCR association function

If you receive an error on your computer requesting you to install an 'Active X' component or the association process fails with a technical error and you did not see the 'certificate security alert pop-up' window as shown in (Figure 10-13) then you may be able to resolve the issue by adding the PCR Association website to your list of trusted websites.

Figure 10-14: Initial association page

To add the PCR Association website to the list of Trusted Websites:

- Open Internet Explorer (this does not have to be the PCR Association page)
- Select the 'Tools' menu and then 'Internet Options' (Figure 10-15)

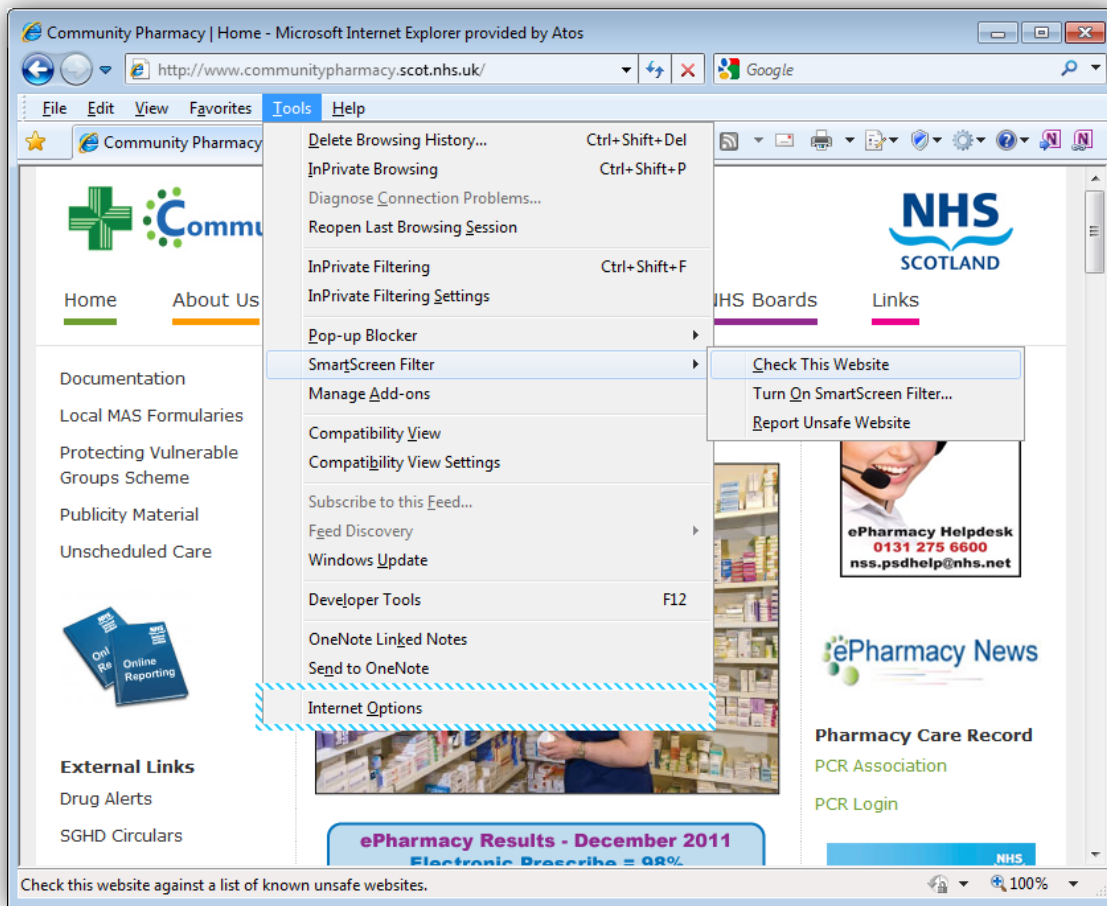

Figure 10-15: Tools > Internet Options (IE8)

- Select the security tab and then select the "Trusted sites" zone (Figure 10-16).

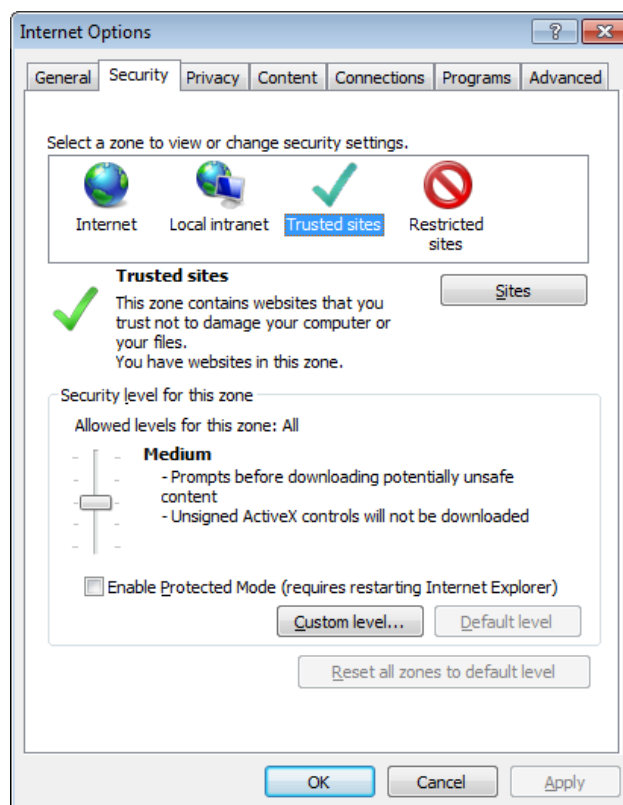

Figure 10-16: Trusted sites zone on security tab

- Click the "Sites" button, the "Trusted" sites dialogue is shown (Figure 10-17)

Figure 10-17: Trusted sites dialogue

If there already is an entry for the PCR association website listed then close all the dialogue boxes and contact the ePharmacy Helpdesk to report your issue with PCR Association.

If there is no entry present:

- Enter the website address for the PCR Association website in the 'Add this website to the zone:' *(Figure 10-17).
- click the 'Add' button, then click the OK button on the trusted sites dialogue and the "ok" button on "Internet Options".

The PCR Association website address is <https://pcrua.mhs.scot.nhs.uk>

After clicking the 'Add' button the dialogue box will be updated and you will see that <https://pcrua.mhs.scot.nhs.uk> is now listed as a trusted website. There can be many websites listed and the PCR Association address may not be at the top of the list.

Re-open Internet Explorer and open the PCR Association page or click on the desktop shortcut if you have previously created one.

Re-attempt to associate yourself with the pharmacy where you are working. If you still get a failure report the issue to the ePharmacy helpdesk.

Additional information to help resolve these issues is available from the community pharmacy website http://www.communitypharmacy.scot.nhs.uk/core_services/pcr.html under PCR Association Error 109 Resolution.

Time Synchronisation Error

The association process requires that the time on your PC is accurate (a maximum of a 10-minute leeway is allowed). If you have issues with association please check that the computer's clock is correct (both date and time).

Appendix D: Example test patients

Test patient 1:

Name:

Ms Sally Shortbread

CHI number:

5555555555

Relevant medical history:

Hypertension (2 years ago)

Osteoarthritis (3 years ago)

Current drug therapy:

Bendroflumethiazide 2.5 mg tablets: one daily (started 2 years ago) Lisinopril 10 mg tablets: one daily (started 1 year ago)

Paracetamol 500 mg tablets: one three times a day (started 3 years ago)

Other information:

Doesn't always take her diuretic due to concerns about night-time diuresis, especially when staying with family. (Patient takes ACE inhibitor and diuretic together at tea-time).

Has difficulty pressing out paracetamol tablets from the blister pack.

Suffers arthritic pain regularly.

Smoker

Test patient 2:

Name:

Mr Bertie Biscuit

CHI number:

7777777777

Relevant medical history:

Diabetes (10 years ago)

Hypertension (5 years ago)

Current drug therapy:

Metformin 500 mg tablets: one twice daily (started 7 years ago) Ramipril 10 mg capsules: one daily (started 3 years ago) Bendroflumethiazide 2.5 mg tablets: one daily (started 5 years ago) Simvastatin 40 mg tablets: one daily (started 3 years ago)

Previous drug therapy:

Glibenclamide 5mg tablets: once daily (stopped 9 years ago) Tolbutamide 500mg tablets: two daily (stopped 7 years ago)

Other information:

Poor understanding of rationale of medicines Poor vision due to cataracts

Overweight

Smokes about 10 cigarettes a day

Test patient 3:

Name:

Mr Colin Cracker

CHI number:

9999999999

Relevant medical history:

COPD (1 year ago)

Osteoarthritis (15 years ago)

Current drug therapy:

Paracetamol 500 mg: two three or four times daily (10 years ago) Salbutamol inhaler: two puffs when required (1 year ago) Tiotropium 18 mcg inhaler: one puff daily (6 months ago) Symbicort 400/12 inhaler: one puff twice daily (3 months ago)

Previous drug therapy:

Amoxicillin 500mg capsules: one three times a day Co-amoxiclav 625mg tablets: one three times a day Prednisolone 5mg tablets: eight daily

Other information:

Suffers frequently with chest infections.

Uses salbutamol inhaler – 4 puffs six times daily – doesn't get much benefit – no tremors or palpitations. Wife says white 'smoke' comes out his mouth after using it.

Smoker

Slightly overweight

Hepatic function:	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Not Applicable	<input checked="" type="radio"/> Not Recorded	
Renal function:	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Not Applicable	<input checked="" type="radio"/> Not Recorded	
Lung function:	<input checked="" type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Not Applicable	<input type="radio"/> Not Recorded	<i>Patient has COPD and smokes which will impact on lung function.</i>
Immune status:	<input type="radio"/> Yes	<input type="radio"/> No	<input type="radio"/> Not Applicable	<input checked="" type="radio"/> Not Recorded	

Patient Factors: Maternal

Pregnant:	<input type="radio"/> Yes	<input type="radio"/> No	<input checked="" type="radio"/> Not Applicable	<input type="radio"/> Not Recorded	
Breastfeeding:	<input type="radio"/> Yes	<input type="radio"/> No	<input checked="" type="radio"/> Not Applicable	<input type="radio"/> Not Recorded	

Pharmaceutical Care Plan Priority

<p>PCP Priority:</p> <ul style="list-style-type: none"> <input type="radio"/> Low Priority <input type="radio"/> Medium Priority <input checked="" type="radio"/> High Priority 	<p><i>Improve inhaler technique.</i></p> <p><i>Provide smoking cessation advice and support.</i></p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------

Care Plan

Care Issue	Desired outcome	Action	Action by (Pharmacist, GP, Nurse, Patient)	Response
Poor MDI inhaler technique leading to overuse of salbutamol inhaler	Improve inhaler technique or consider a spacer or an alternative type of inhaler	Teach better inhaler technique and review progress	Pharmacist	Technique much improved and patient reporting better control of COPD
Patient is a smoker	Encourage and support the patient to stop smoking	Discuss risks of smoking with patient and offer to	Pharmacist	Patient enrolled on the PHS smoking cessation service
Lifestyle risk factor (patient slightly overweight)	Reduce risk factors	Provide lifestyle advice e.g. healthy diet, take regular exercise, alcohol intake	Pharmacist	Patient is taking more exercise and has lost weight
