1. Clinical condition to which the patient group direction applies

<table>
<thead>
<tr>
<th>Indication</th>
<th>Minor staphylococcal infection of skin (impetigo)</th>
</tr>
</thead>
</table>
| Inclusion criteria | • Minor staphylococcal infection of skin (impetigo).  
• Patient aged 2 years of age or over.  
• Skin infection limited to one area of the body (e.g. one only of face, trunk, arms or legs).  
• 25% or less of the affected area involved.  
• The rash consists of vesicles that weep and then dry to form yellow-brown crusts.  
• Must obtain parental/guardian consent for treating a child under 16 years of age.  
• Patient must be present at consultation.  
• Valid consent to treatment in accordance with NHS Fife Consent Policy |
| Exclusion criteria | • Features of more severe infection (indications for systemic therapy)  
  - More extensive involvement (> 25% of the infected area)  
  - Fever  
  - Altered mental state  
  - Diarrhoea or vomiting  
  - Swollen glands  
  - Redness extending more than 2cm from lesions (suggestive of cellulitis)  
  - Bullous impetigo – presence of blisters 1cm or more in size, more often on the trunk than the face.  
• Multiple skin site infection.  
• Painful rash (this is more likely to be eczema herpeticum rather than impetigo).  
• Impetigo in the last 3 months OR 2 or more prescriptions for Fusidic Acid in the last 12 months (implies infection unresponsive to treatment which may suggest presence of a resistant isolate).  
• Prescription in the last 12 months for a topical antibacterial agent other than Fusidic Acid (e.g. Bactroban) as this implies the presence of a resistant isolate.  
• Children under 2 years of age.  
• Known hypersensitivity to any component of the medicine.  
• Presenting with any underlying skin conditions on the same area of the body as impetigo  
• Concerns regarding patient compliance with topical medication.  
• Non consent |
| Cautions (including action to be taken if caution applies) | • Avoid contact of cream with the eyes  
• Bacterial resistance among staphylococcus aureus has been reported to occur with the use of topical fusidic acid. Extended or recurrent use may increase the risk of developing antibiotic resistance.  
• It is the responsibility of the designated authorised staff using this PGD to ensure that treatment with the drug detailed is appropriate. If there is any doubt then advice should be sought and recorded before the drug is administered |
• No effects on the breast-fed new-born/infant are anticipated since the systemic exposure of topically-applied fusidic acid/sodium fusidate to the breast-feeding woman is negligible. Topical fusidic acid can be used during breast-feeding but it is recommended to avoid applying topical fusidic acid on the breast.

**Action if excluded**
- Do not use the PGD
- Refer patient for further medical advice (General Practitioner or NHS Fife Primary Care Emergency Service (PCES))
- The reason for referral must be documented in pharmacy patient medical record (PMR) or patient care record (PCR) and retain a copy of referral letter (appendix 2)
- Inform GP of decision to exclude and action taken (referral made), the patient medical record can be updated accordingly.

**Action if patient declines treatment**
- Patient should be advised of self management options and advised to see their GP if symptoms fail to resolve within 3 days or symptoms worsen
- Where patient needs cannot be met in the pharmacy, refer to GP, NHS Fife Primary Care Emergency Service (PCES), Accident and Emergency or Sexual Health Clinic as appropriate.
- The reason for refusal must be documented
- Ensure patient is aware of implications of declining treatment

</table>
### Legal category
- POM

### Black triangle drug
- No

### Use out with SPC
- No

### Storage requirements
- Store below 25°C in a cool dry place
- Ensure cream is within expiry date

### Identification and management of adverse reactions

<table>
<thead>
<tr>
<th>Side effects</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Various skin reactions such as pruritus and rash, followed by application site conditions such as pain and irritation. Hypersensitivity and angioedema have also been reported.</td>
<td></td>
</tr>
</tbody>
</table>

- Advise to contact nurse/GP if side effects occur.
- For a full list of side effects refer to the marketing authorisation holder’s Summary of Product Characteristics (SPC). A copy of the SPC must be available to the health professional administering medication under this Patient Group Direction. This can be accessed on [https://www.medicines.org.uk/emc/medicine/2374](https://www.medicines.org.uk/emc/medicine/2374).
- If a serious adverse reaction is suspected please report to the Commission on Human Medicines (CHM) via the Yellow Card Scheme [http://yellowcard.mhra.gov.uk/](http://yellowcard.mhra.gov.uk/).
- Any adverse events/incidents should also be reported to the patient’s GP.

### Additional facilities/supplies required
- Access to a BNF

### Staff characteristics

#### Define Practitioner Group
- Pharmacists working in community pharmacy within NHS Fife

#### Professional qualifications
- Registered pharmacist with current General Pharmaceutical Council (GPhC) registration

#### Specialist competencies or qualifications
- Registered pharmacist is competent to undertake supply and administration of medicines under Patient group directions
- Has successfully completed NES Pharmacy e-learning module on “Pharmacy First”
- Able to assess the patient’s/guardian’s capacity to understand the nature and purpose of the medication in order to give or refuse consent.

#### Continued training requirements
- Maintain own professional level of competence and knowledge in this area
- Undertake appropriate training as deemed necessary by NHS Fife.
4. Referral arrangements/Audit trail

5. Management and monitoring of Patient Group Direction

Pharmacist Agreement (Authorisation Form)

Supply of Fusidic Acid Cream 2% by Community Pharmacists

I __________________, confirm that I have read and understood the above Patient Group Direction. I confirm that I have the necessary professional registration, competence, and knowledge to apply the Patient Group Direction. I confirm that I have successfully completed the NES e learning module on Pharmacy First. I will ensure my competence is updated as necessary. I will have ready access to a copy of the Patient Group Direction in the clinical setting in which the supply of the medicine will take place and agree to provide this medicine only in accordance with this PGD.

I understand that it is the responsibility of the pharmacist to act in accordance with the Code of Ethics for Pharmacists and to keep an up to date record of training and competency.

Name of Pharmacist

GPharm Council Registration No.

Normal Pharmacy Location

Signature

Date

Note:

A copy of this agreement must be signed by each pharmacy practitioner who wishes to be authorised to use the PGD for the supply of Fusidic Acid Cream 2%.

Please fax a copy of this page to Pharmacy services on 01383 741395 or

Email: loualexander@nhs.net
Post: Pharmacy Services, Pentland Block, Lynebank Hospital, Dunfermline KY11 4UW

Each authorised pharmacy practitioner should be provided with an individual copy of the authorised PGD.

The following patient has attended this pharmacy for assessment and treatment of a Minor Staphylococcal Skin Infection (Impetigo)

Patient name: 
Date of Birth: [DD/MM/YYYY] 
CHI: (If available) 
Patient address: 

Following assessment (Tick as Appropriate):
Your patient has been given a 7 day course of Fusidic Acid Cream 2% three or four times daily (1 x 15g) [ ]
Self care advice only [ ]
Patient is unsuitable for treatment via PGD for the following reason and has been referred [ ]

......................................................................................................................................................................................
You may wish to include this information in your patient records.

Patient consent: I can confirm that the information provided is a true reflection of my individual circumstances and I give my consent to allow an NHS Fife Pharmacist to provide the most appropriate advice and/or treatment for me. I also give my permission to allow the pharmacist to pass, to my own GP, details of this consultation and any advice given or treatment provided. I have been advised that some of the information may be used to assess the uptake of the service but that this will be totally anonymous and not be attributable to any individual patient.

Patient Signature: [Signature]  Date: [DD/MM/YYYY]

This form should now be sent to the patient’s GP and a copy retained in the pharmacy.
Appendix 3

Impetigo – Patient Information for treatment and self care advice

During treatment, it is important to take precautions to minimise the risk of impetigo spreading to other people or to other areas of the body.

Most people are no longer contagious after 48 hours of treatment or once their sores have dried and healed. It is important to stay away from work, school, nursery or playgroup until this point.

The advice below can also help to prevent the spread of the infection:

- Wash hands before and after applying cream
- Where possible remove the crusts by bathing in warm water before applying the cream
- Do not share flannels, sheets or towels with anyone who has impetigo – wash them at a high temperature after use
- Avoid touching or scratching the sores, or letting others touch them – it may help to ensure your nails are kept clean and short
- Avoid contact with newborn babies, preparing food, playing contact sports, or going to the gym – until the risk of infection has passed
- Wash your hands frequently – particularly after touching infected skin
- Washable toys should also be washed – wipe non-washable soft toys thoroughly with a cloth that has been wrung out in detergent and warm water and allowed to dry completely
- To reduce the risk of impetigo returning, make sure any cuts, scratches or bites are kept clean.

- In very rare cases, impetigo may lead to some scarring particularly if you scratch at the blisters, crusts or sores.
