Nicorette QuickMist Mouthspray Trial- Quit Your Way specialist services.

Available to smoking cessation clients from QYW **specialist** services until the end of March 2023.

With varenicline and bupropion currently unavailable the options for products for smoking cessation attempts are limited. To expand the options QYW community and acute services will be offering their clients Nicorette QuickMist mouthspray as an option. This may be as a second product with a patch in dual-NRT or as a single NRT product.

If you receive a product recommendation request for Nicorette Quickmist spray and it is appropriate for your client you can prescribe it without needing to check with the QYW pharmacy team.

At the moment this is targeted for clients from the QYW specialist services but this will be reviewed.

First line products in NHSGGC remain Nicotinell patches, lozenges and gum and Niquitin mini lozenges.

If you have any queries please contact the QYW pharmacy team
